What do you remember from the previous workshop ?

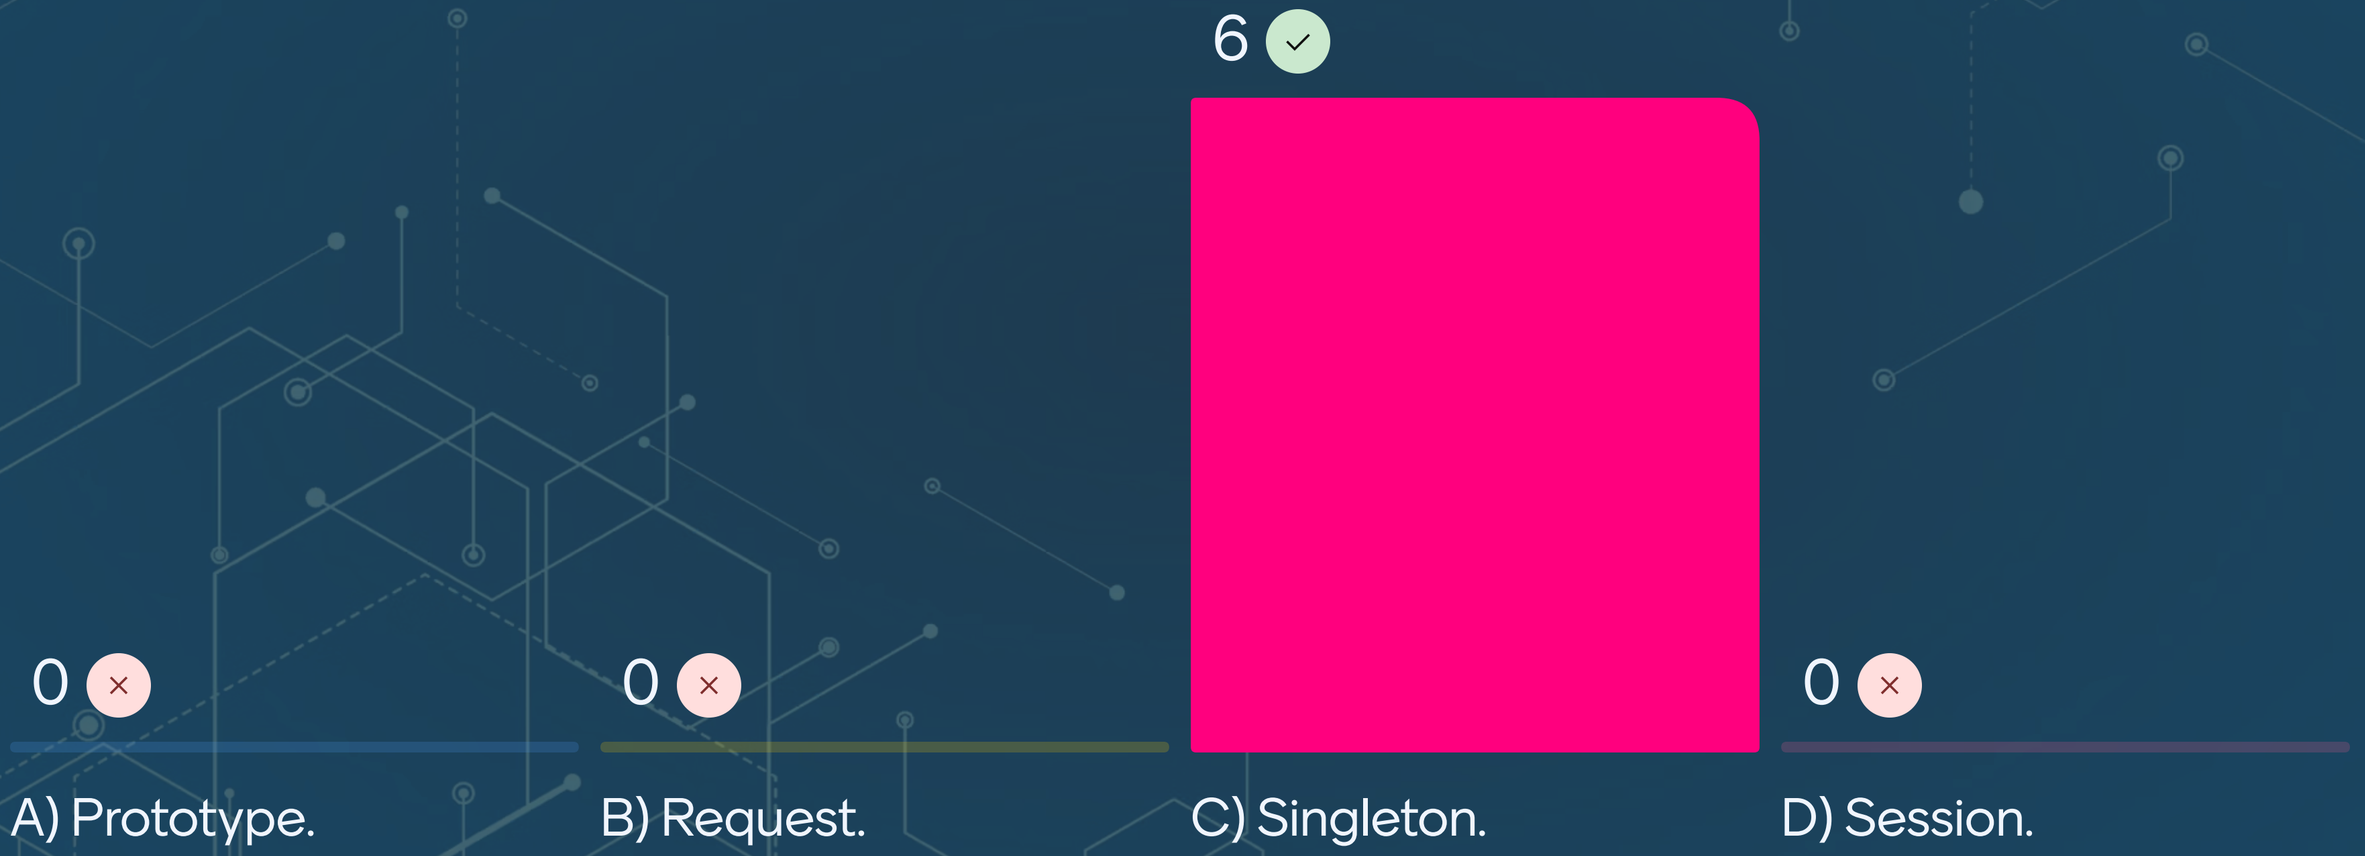

@bean

iso, @Container and...

beans

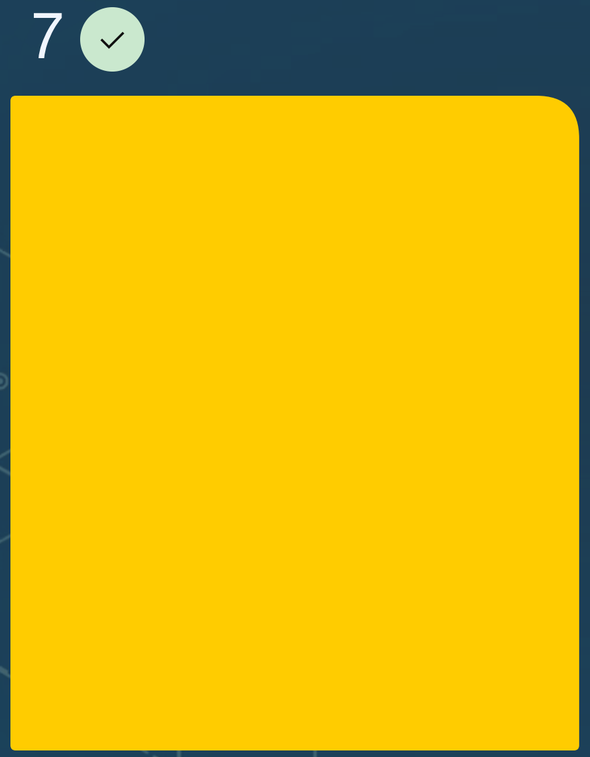

beans

What is the default scope of a Spring bean?

6/6

What role does the ApplicationContext play in the Spring Framework?

0

A) It only manages the HTTP requests in a Spring web application.

7

B) It provides the IoC container and manages the lifecycle of beans.

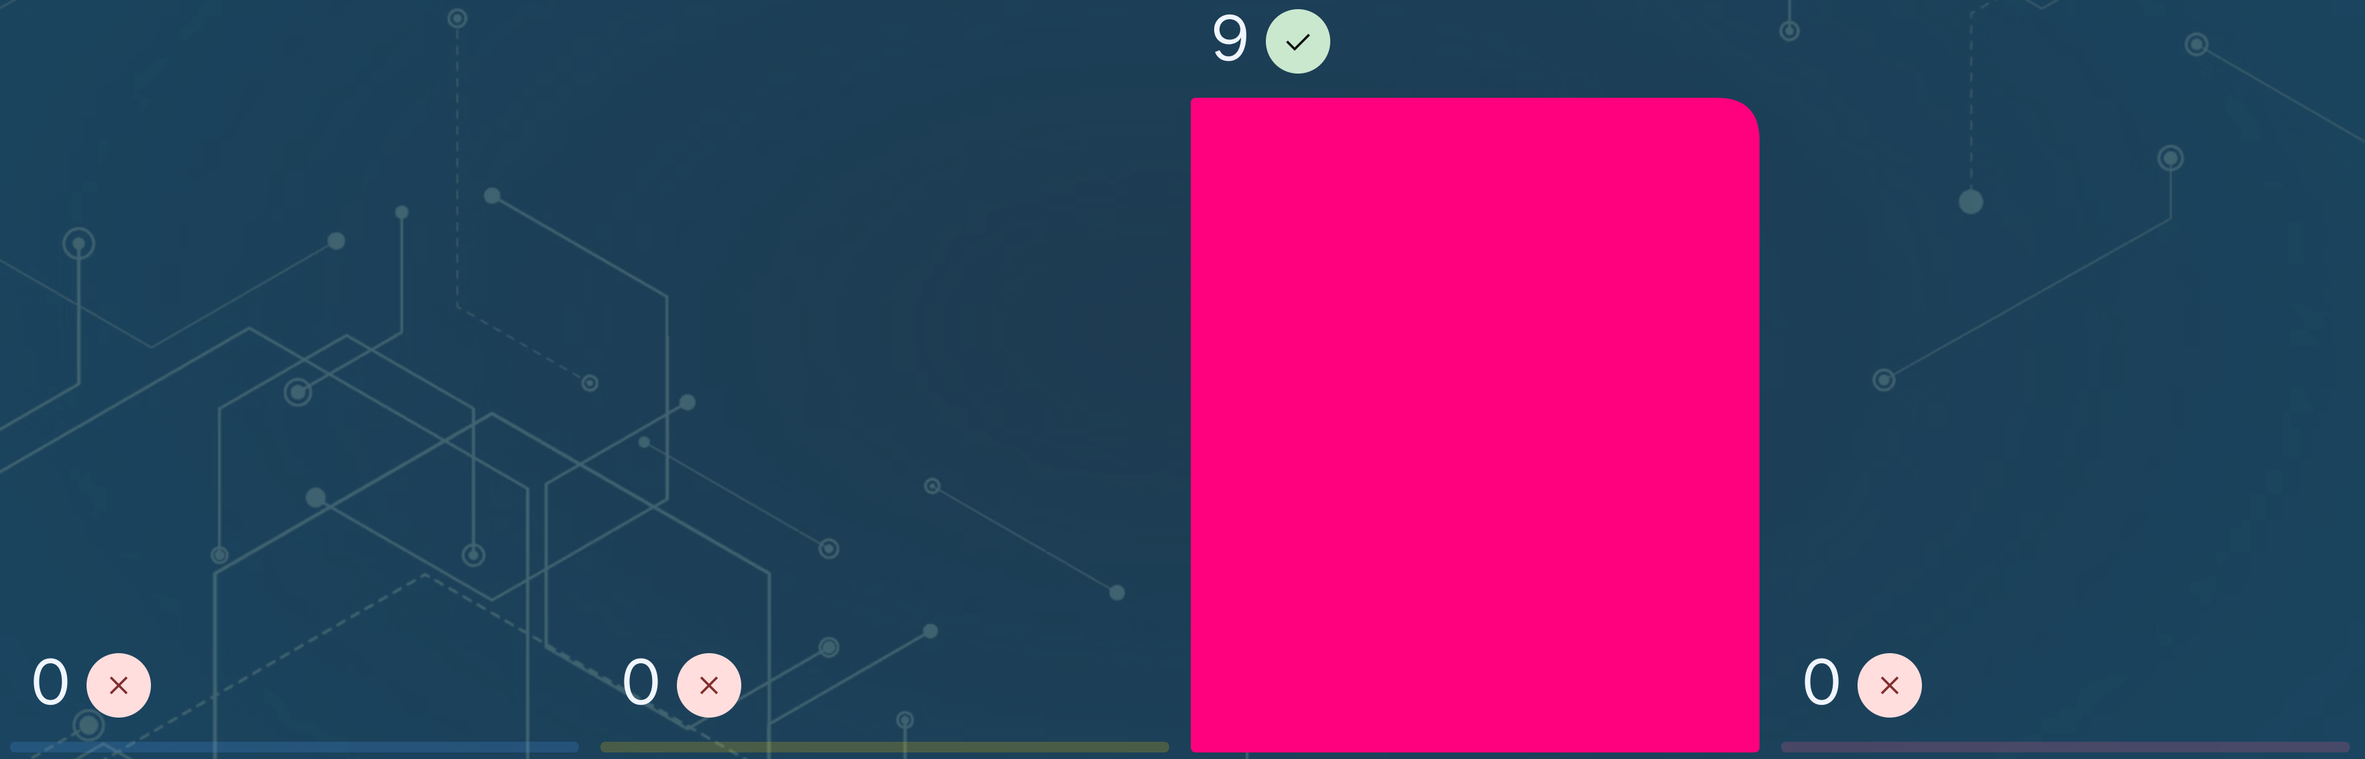

0

C) It stores user authentication details for applications.

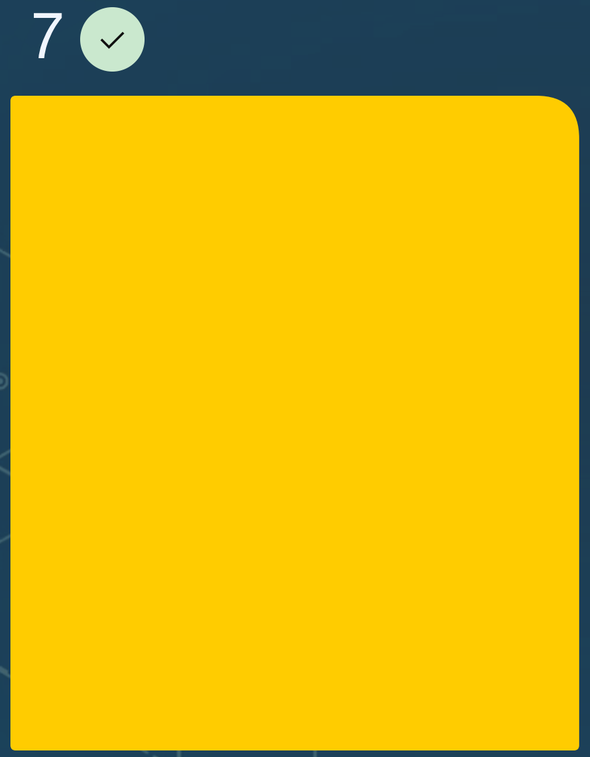

0

D) It performs database operations in the background.

Which of the following is NOT a valid Spring bean scope?

What happens when a bean is defined in the "prototype" scope in Spring?

0

A) Only one instance of the bean is created per Spring IoC container.

7

B) A new bean instance is created each time it is requested.

0

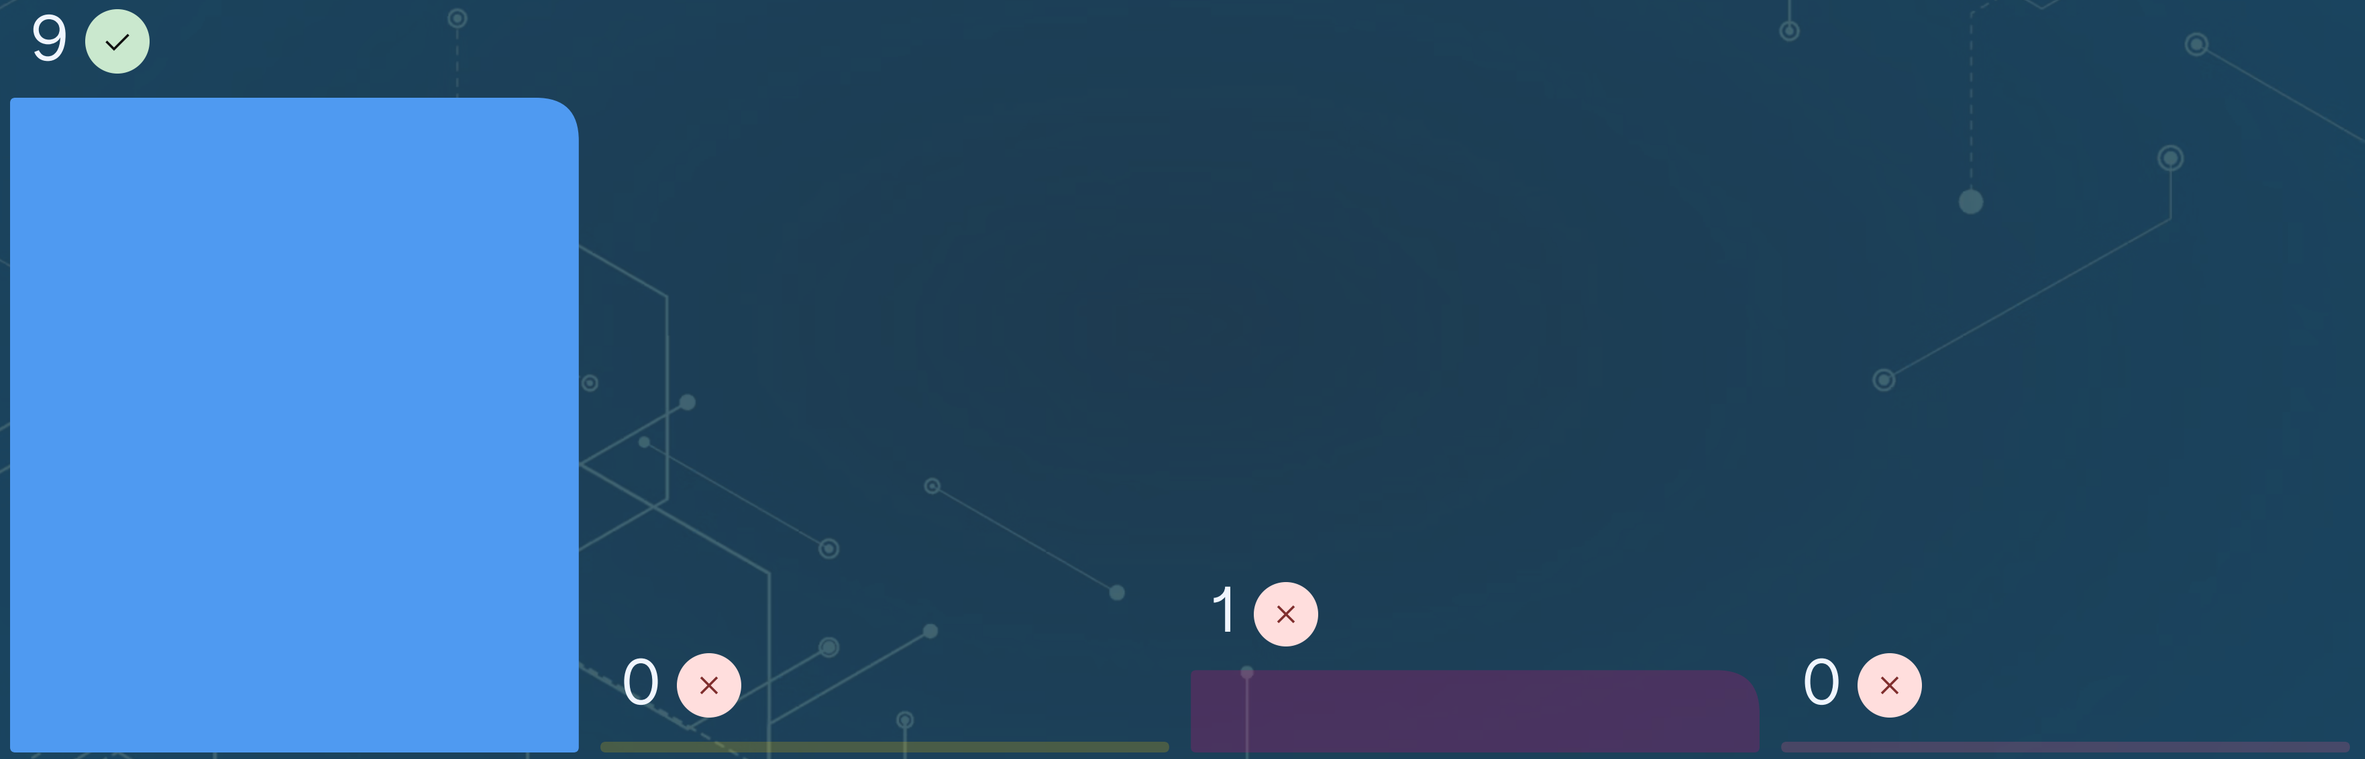

C) The bean is scoped to an HTTP session.

0

D) The bean instance persists across all HTTP requests.

7/7

Which of the following rules applies when using both "by type" and "by name" for dependency resolution in Spring?

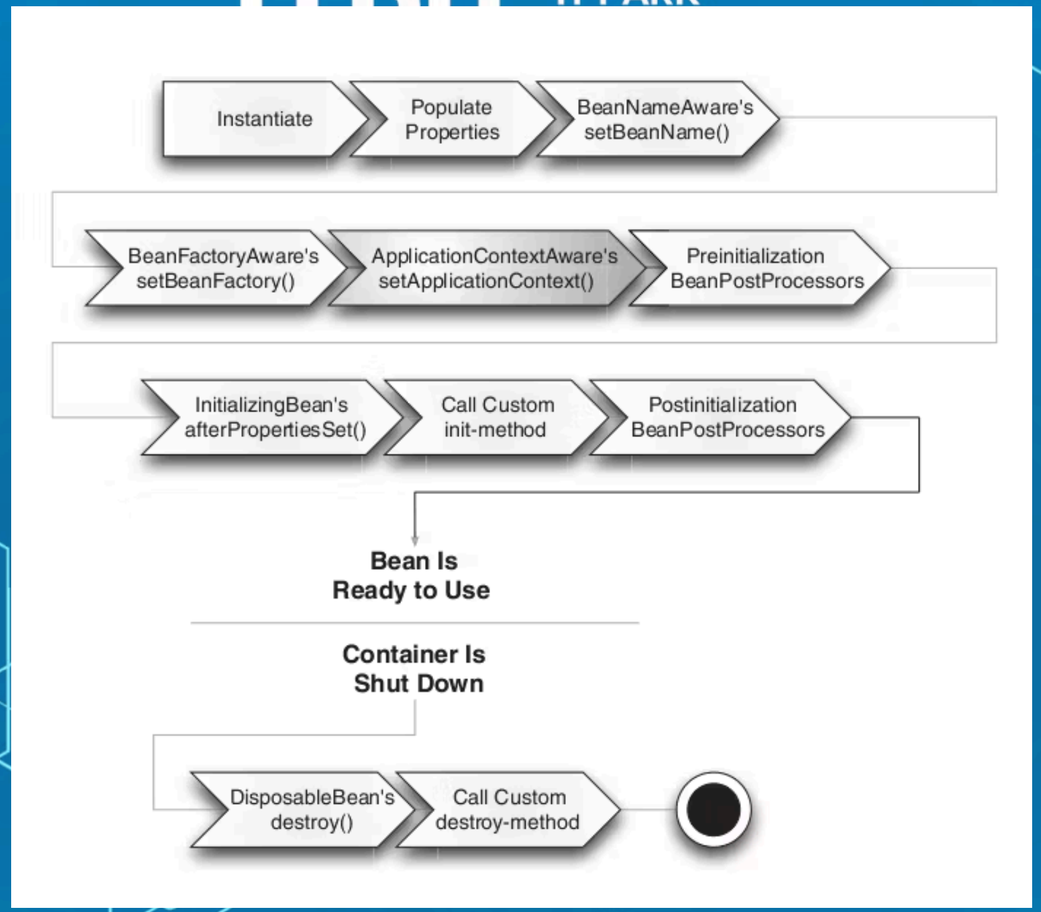

A) "By type" takes precedence over "by name" if a matching type exists

B) "By name" overrides "by type" even if type matches multiple beans

C) Both "by type" ,"by name" must be explicitly defined in annotations

D) Spring ignors rules if ambiguos dependencies exist in IoC Conteiner

What is the primary role of the DispatcherServlet in Spring MVC?

0

A) To manage application-wide configurations.

21

B) Handling HTTP requests and routing them to appropriate controllers

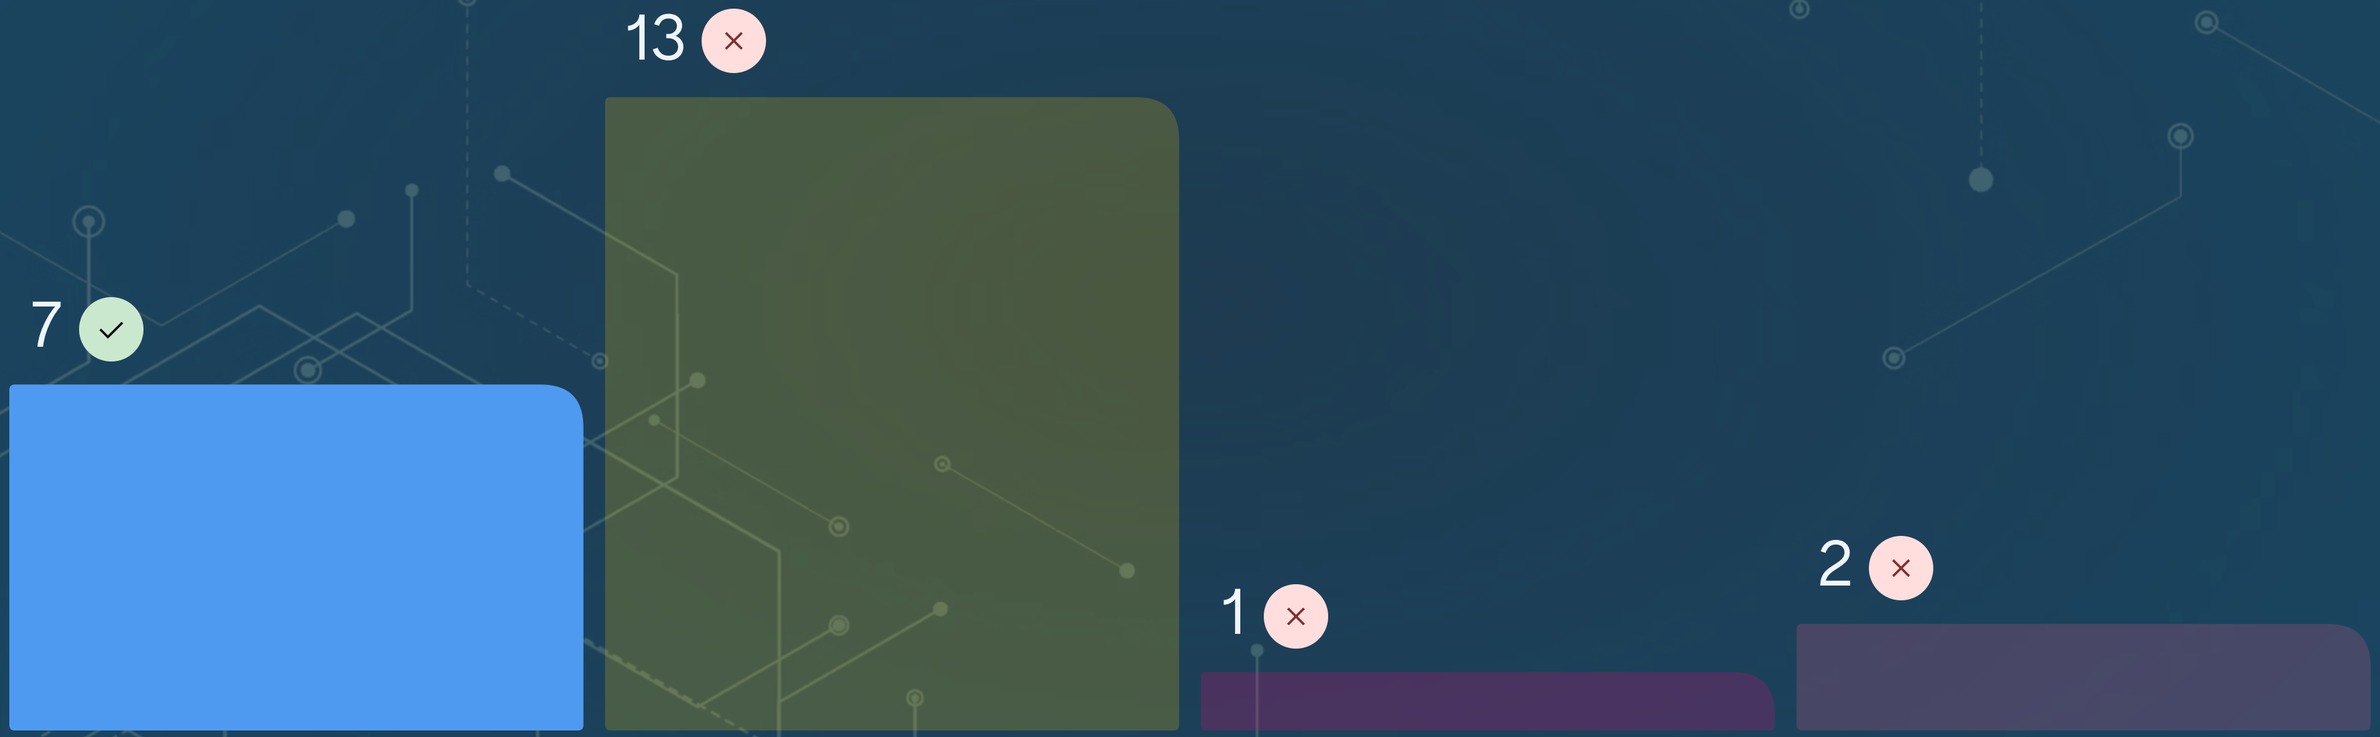

0

C) To manage database connections in web applications.

0

D) To handle application security and authentication.

What is TRUE about DispatcherServlet configuration in Spring MVC?

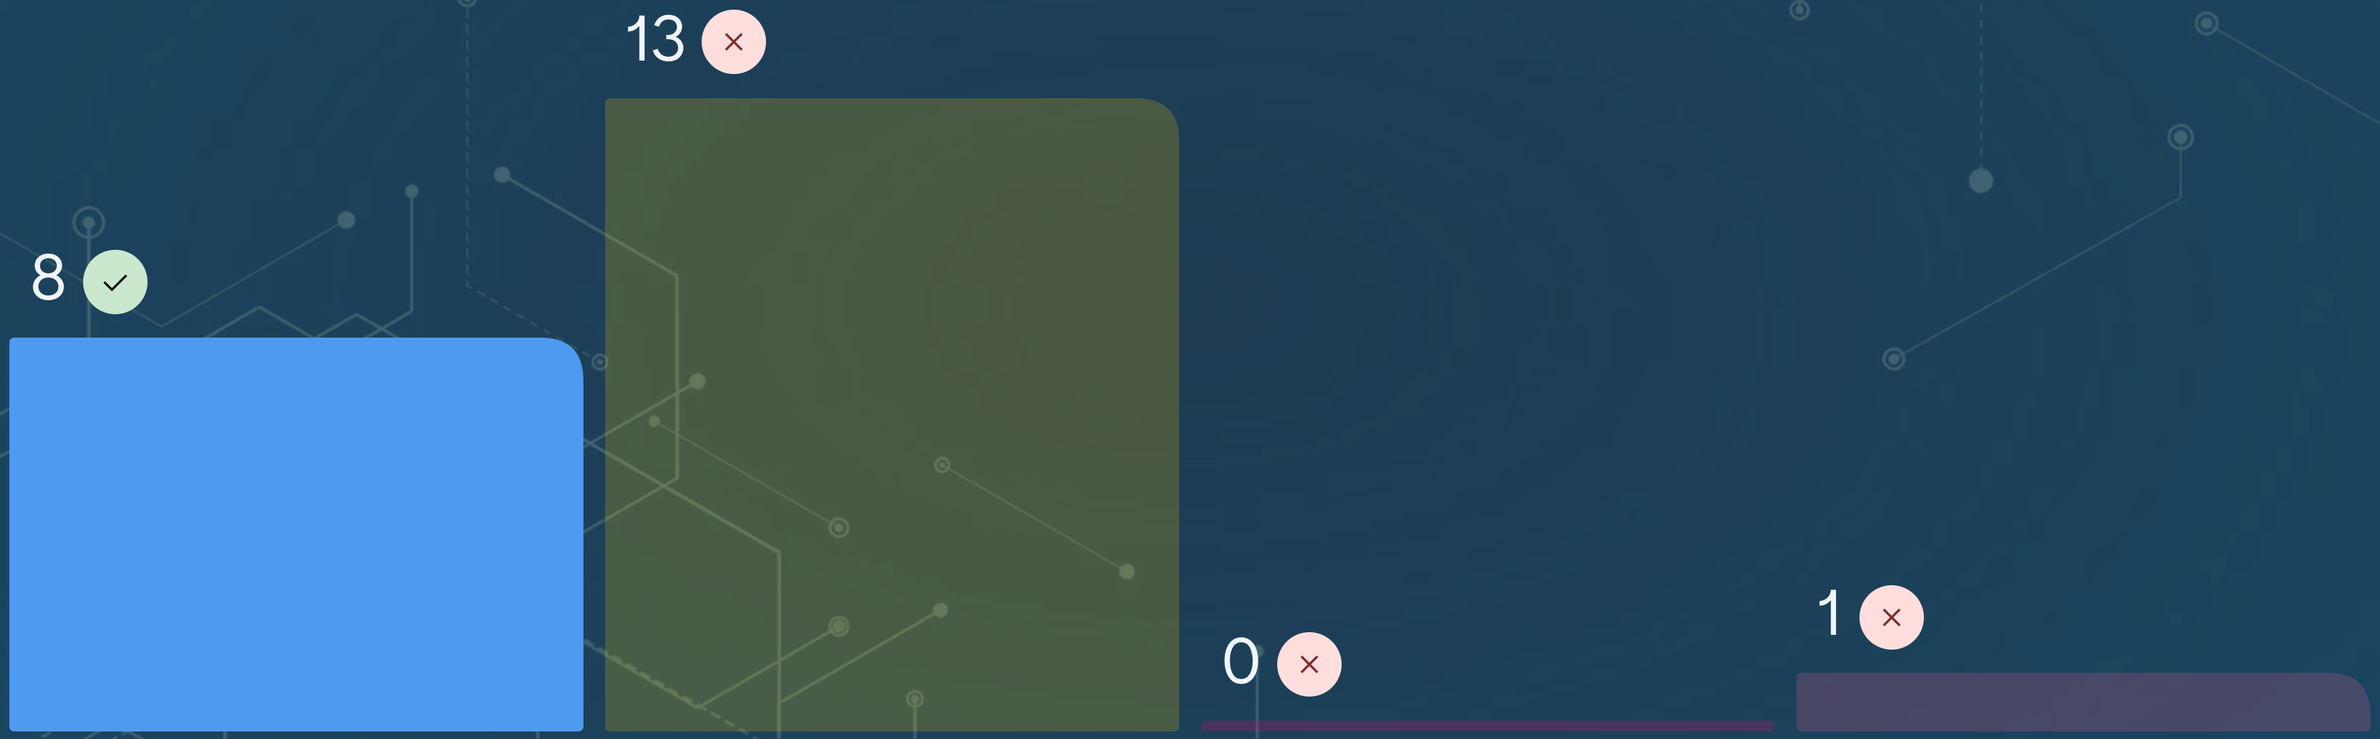

There can only be one DispatcherServlet instance per Spring MVC app

DispatcherServlet is automatically configured, initialized by Spring

DispatcherServlet configuration is optional in Spring MVC apps

DispatcherServlet configuration is primarily done through XML files

Which annotation is typically used in Java-based configuration to define a DispatcherServlet?

A) `@EnableWebMvc`.

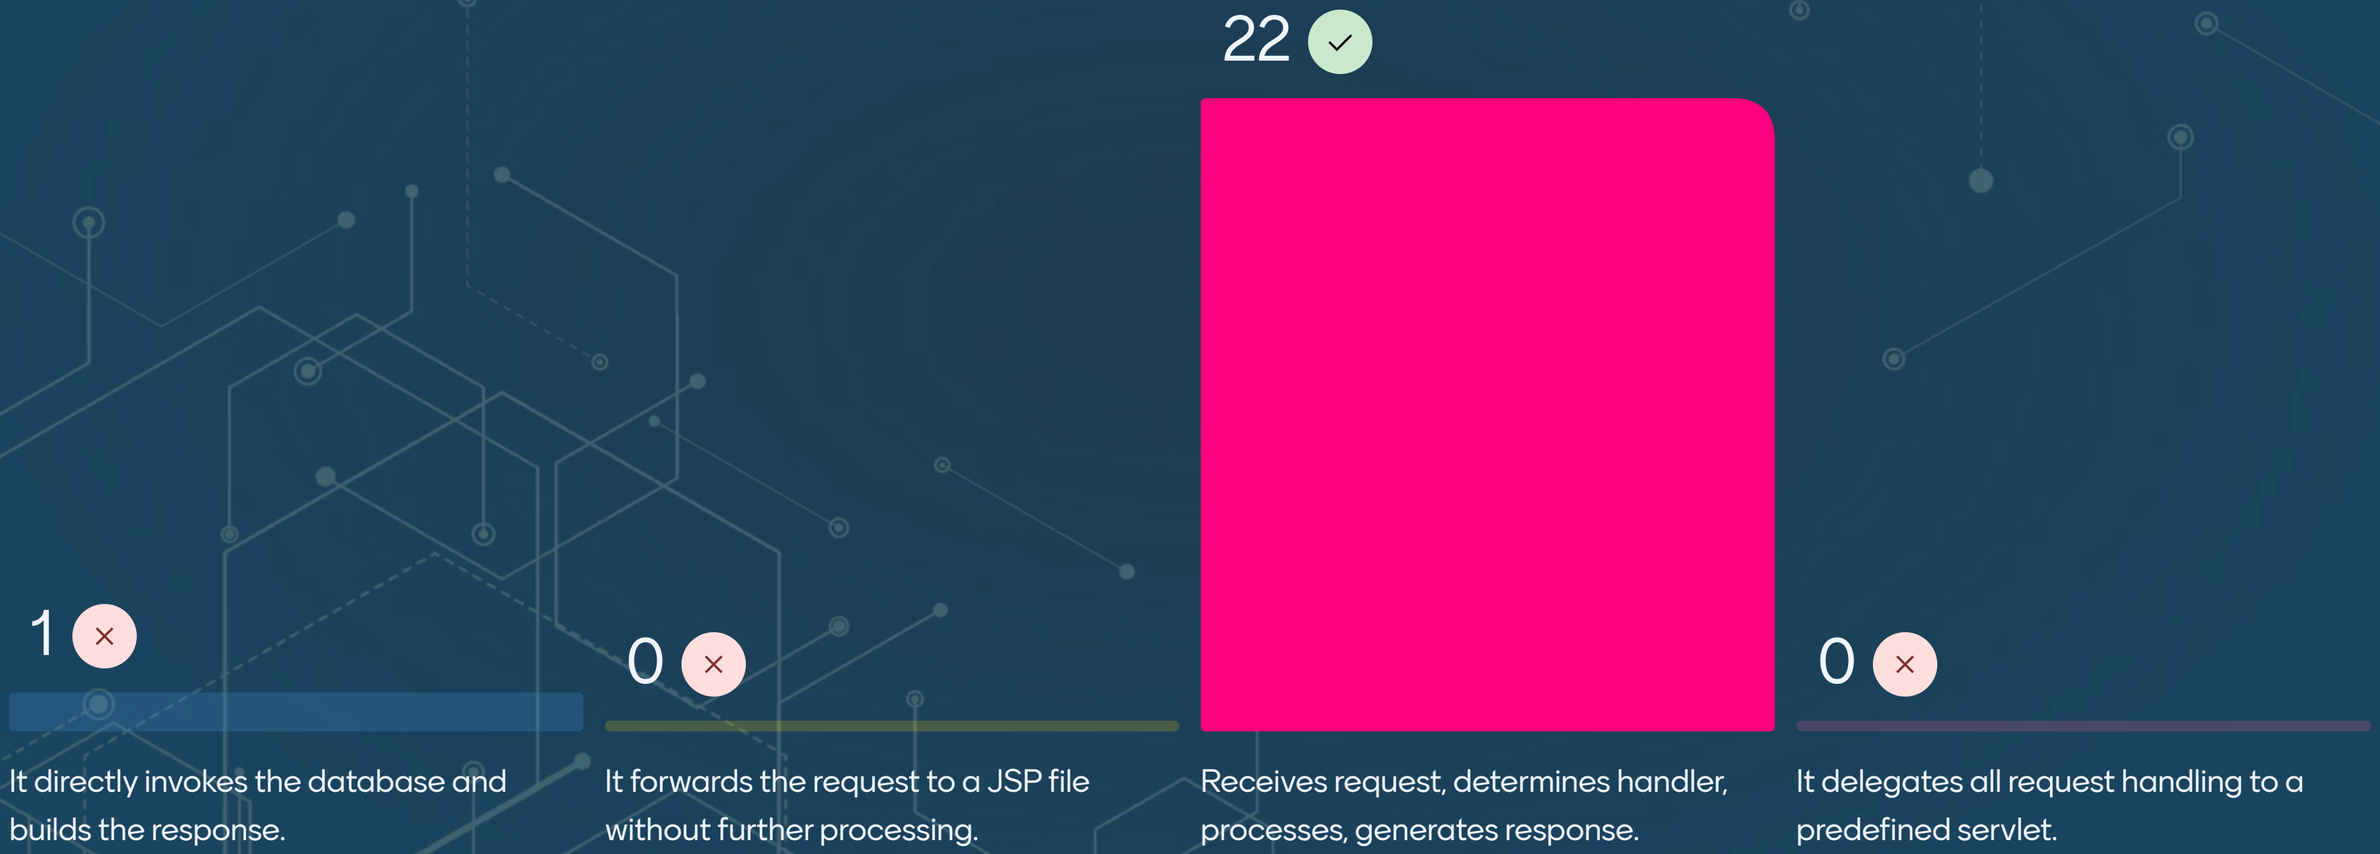

B) `@Bean`.

C) `@RequestMapping`.

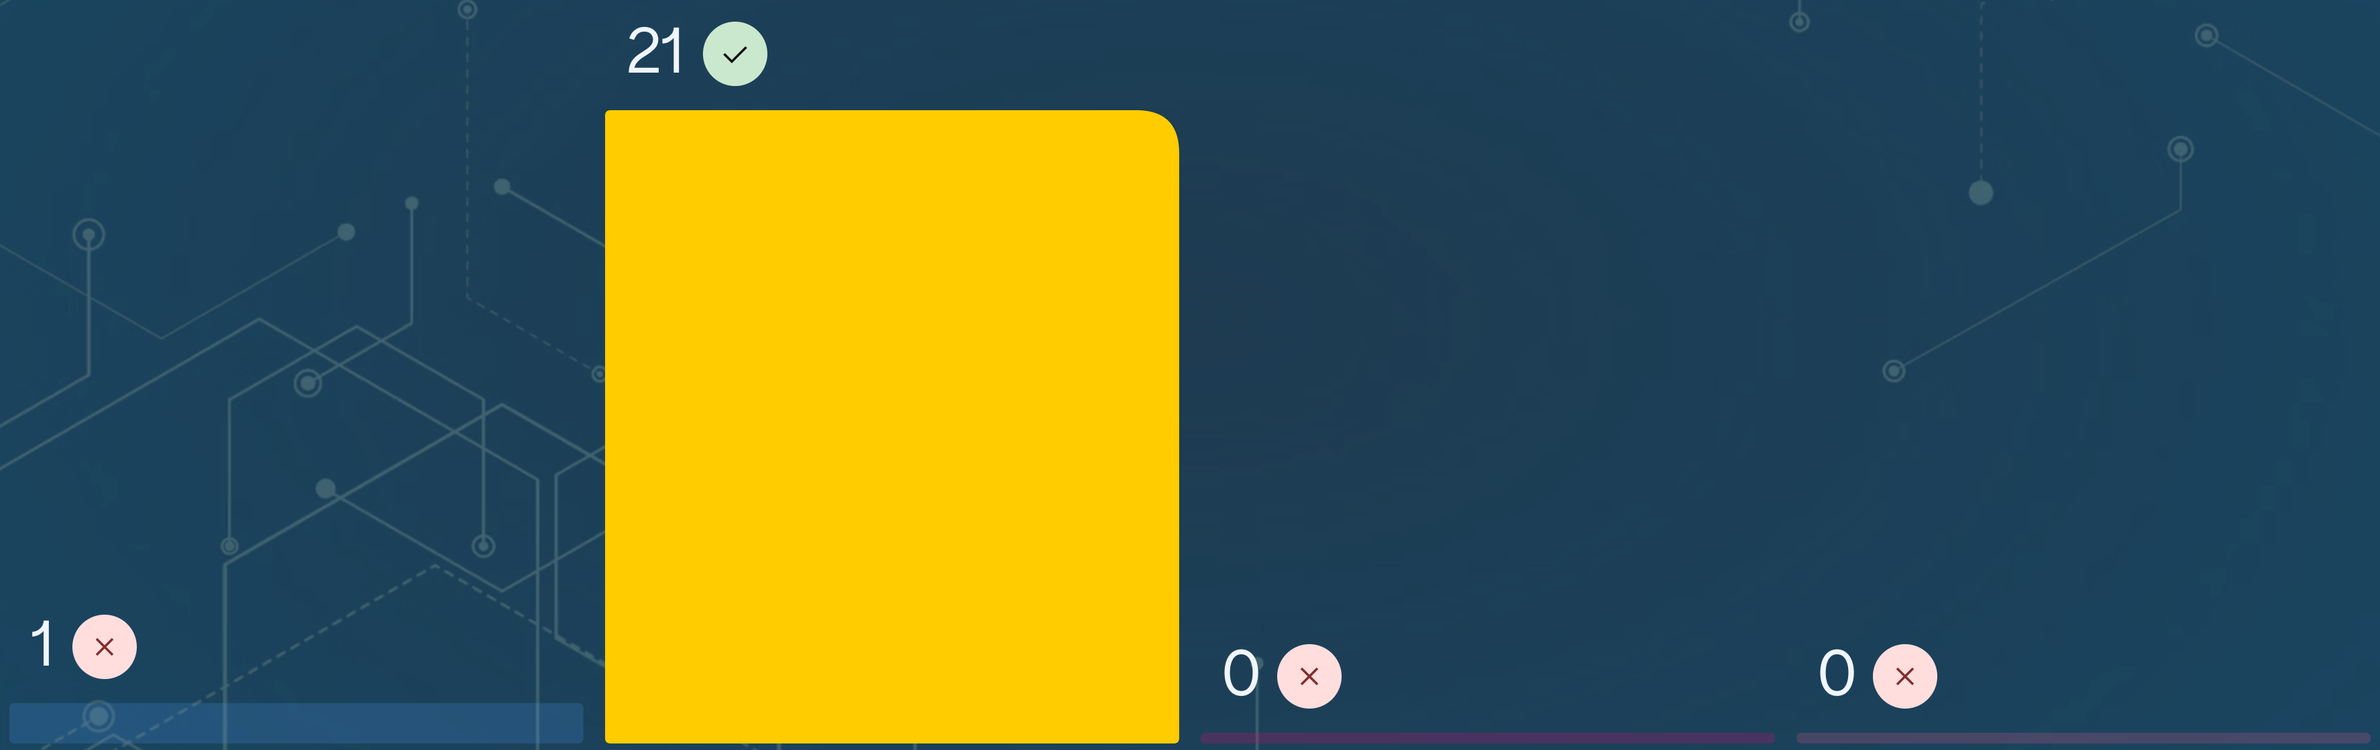

D) `@Component`.

iTPU IT PARK UNIVERSITY

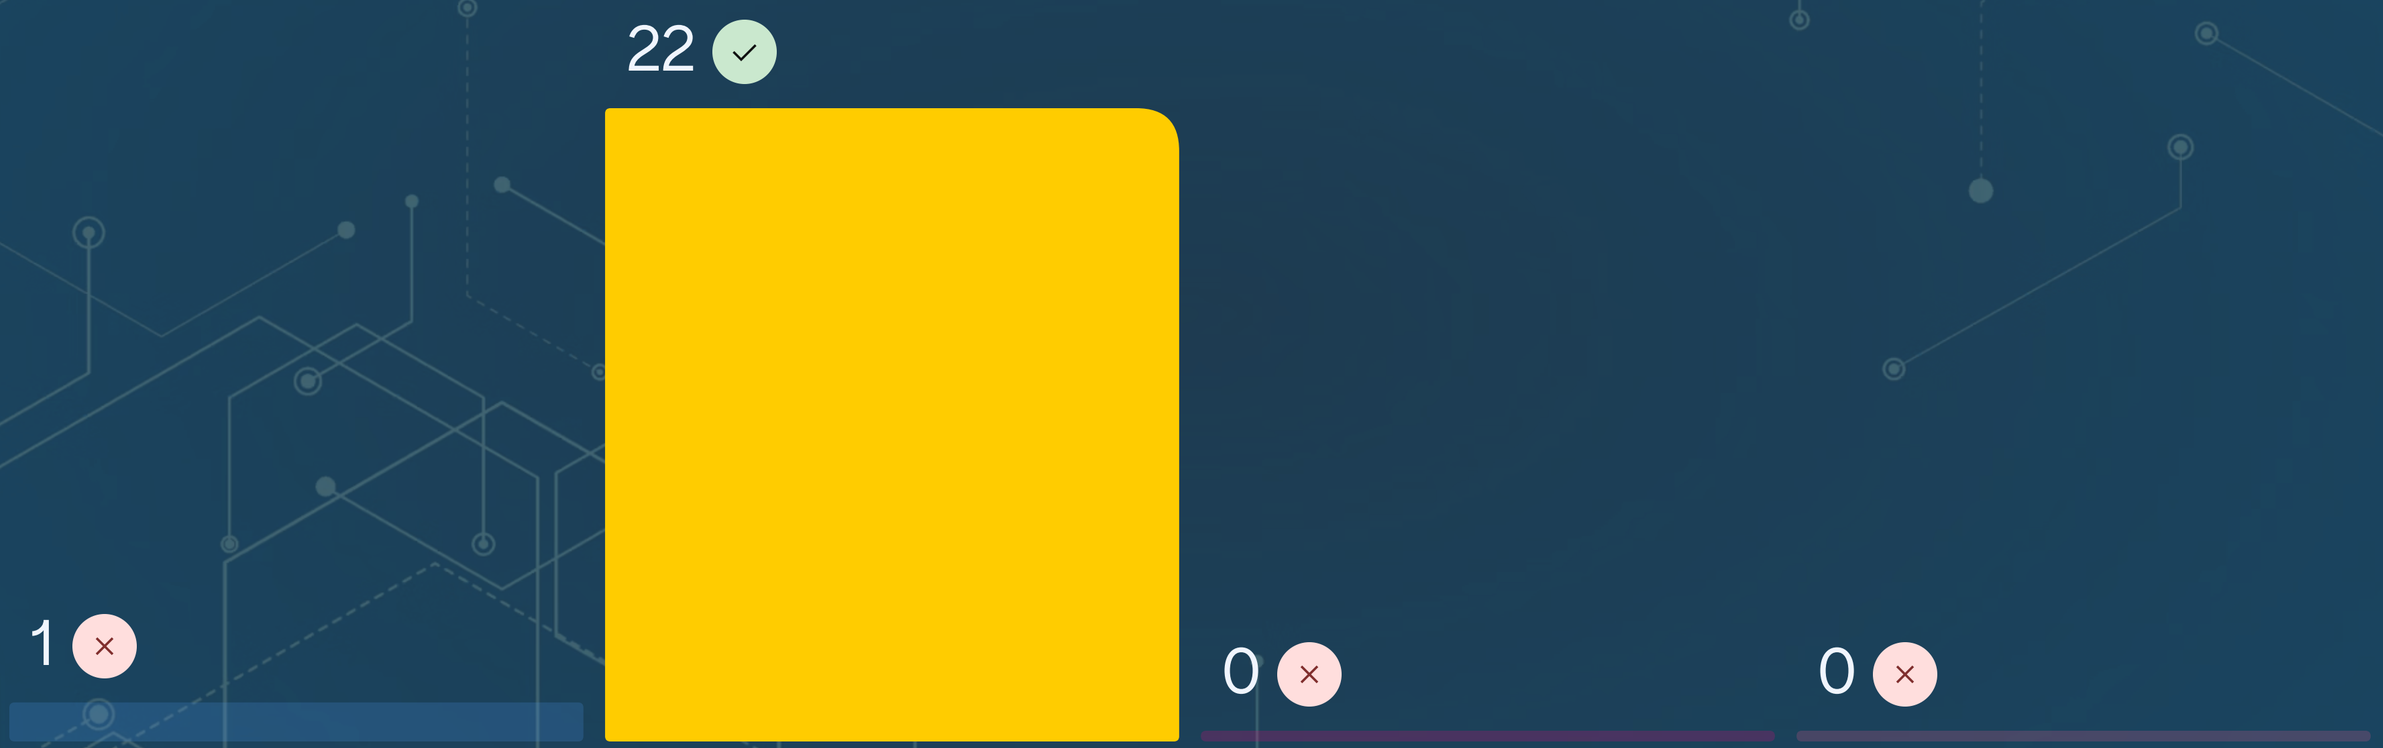

How does the DispatcherServlet process an HTTP request in Spring MVC?

In Spring MVC, what does the @Controller annotation indicate?

In Spring MVC, what happens if no handler mapping is found for a request in the DispatcherServlet?

A) The request is automatically forwarded to a default controller.

B) A 404 error is returned to the client.

C) The DispatcherServlet creates a new handler dynamically.

D) IoC container logs a warning but processes the request by default

Which of the following components work closely with DispatcherServlet as part of the Spring MVC request lifecycle?

23

A) Handler mappings, view resolvers, and controllers.

0

B) Database connectors, application contexts, and filters.

0

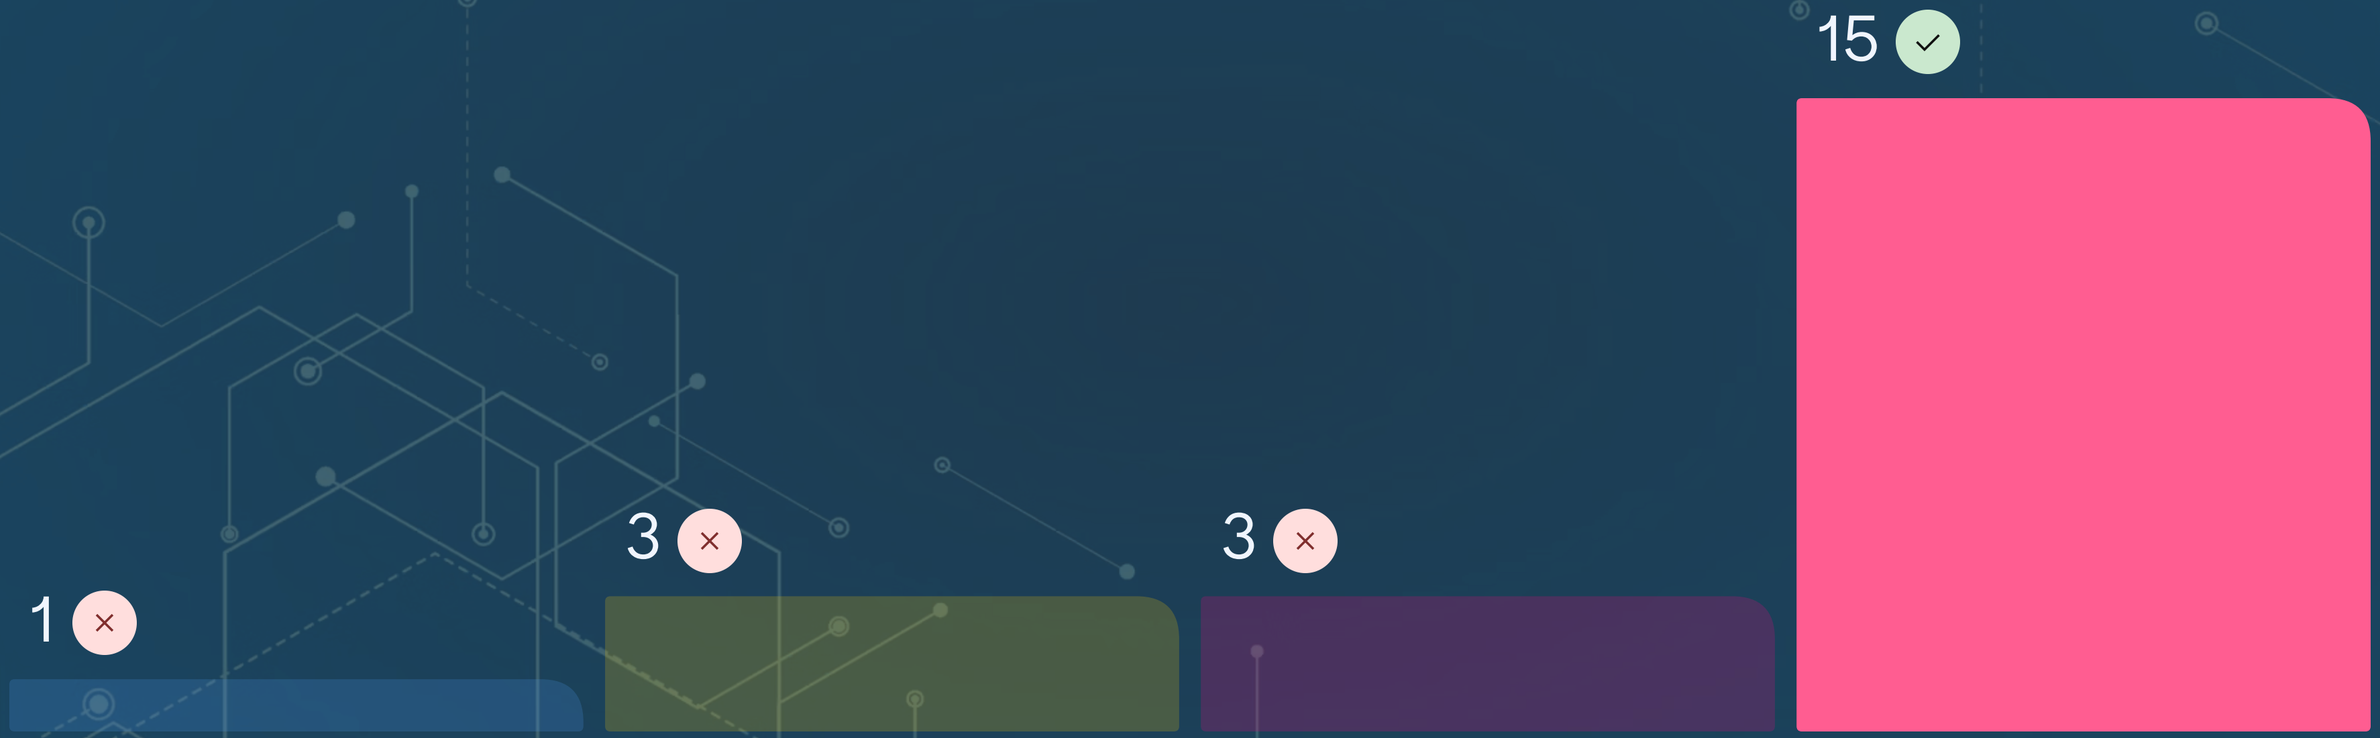

C) Security managers, REST templates, and JSP engines.

0

D) Entity beans, services, and configuration resources.

iTPU IT PARK UNIVERSITY

How can you configure the DispatcherServlet in a Java-based Spring MVC application?

A) By registering it as a Spring bean in a `@Configuration` class.

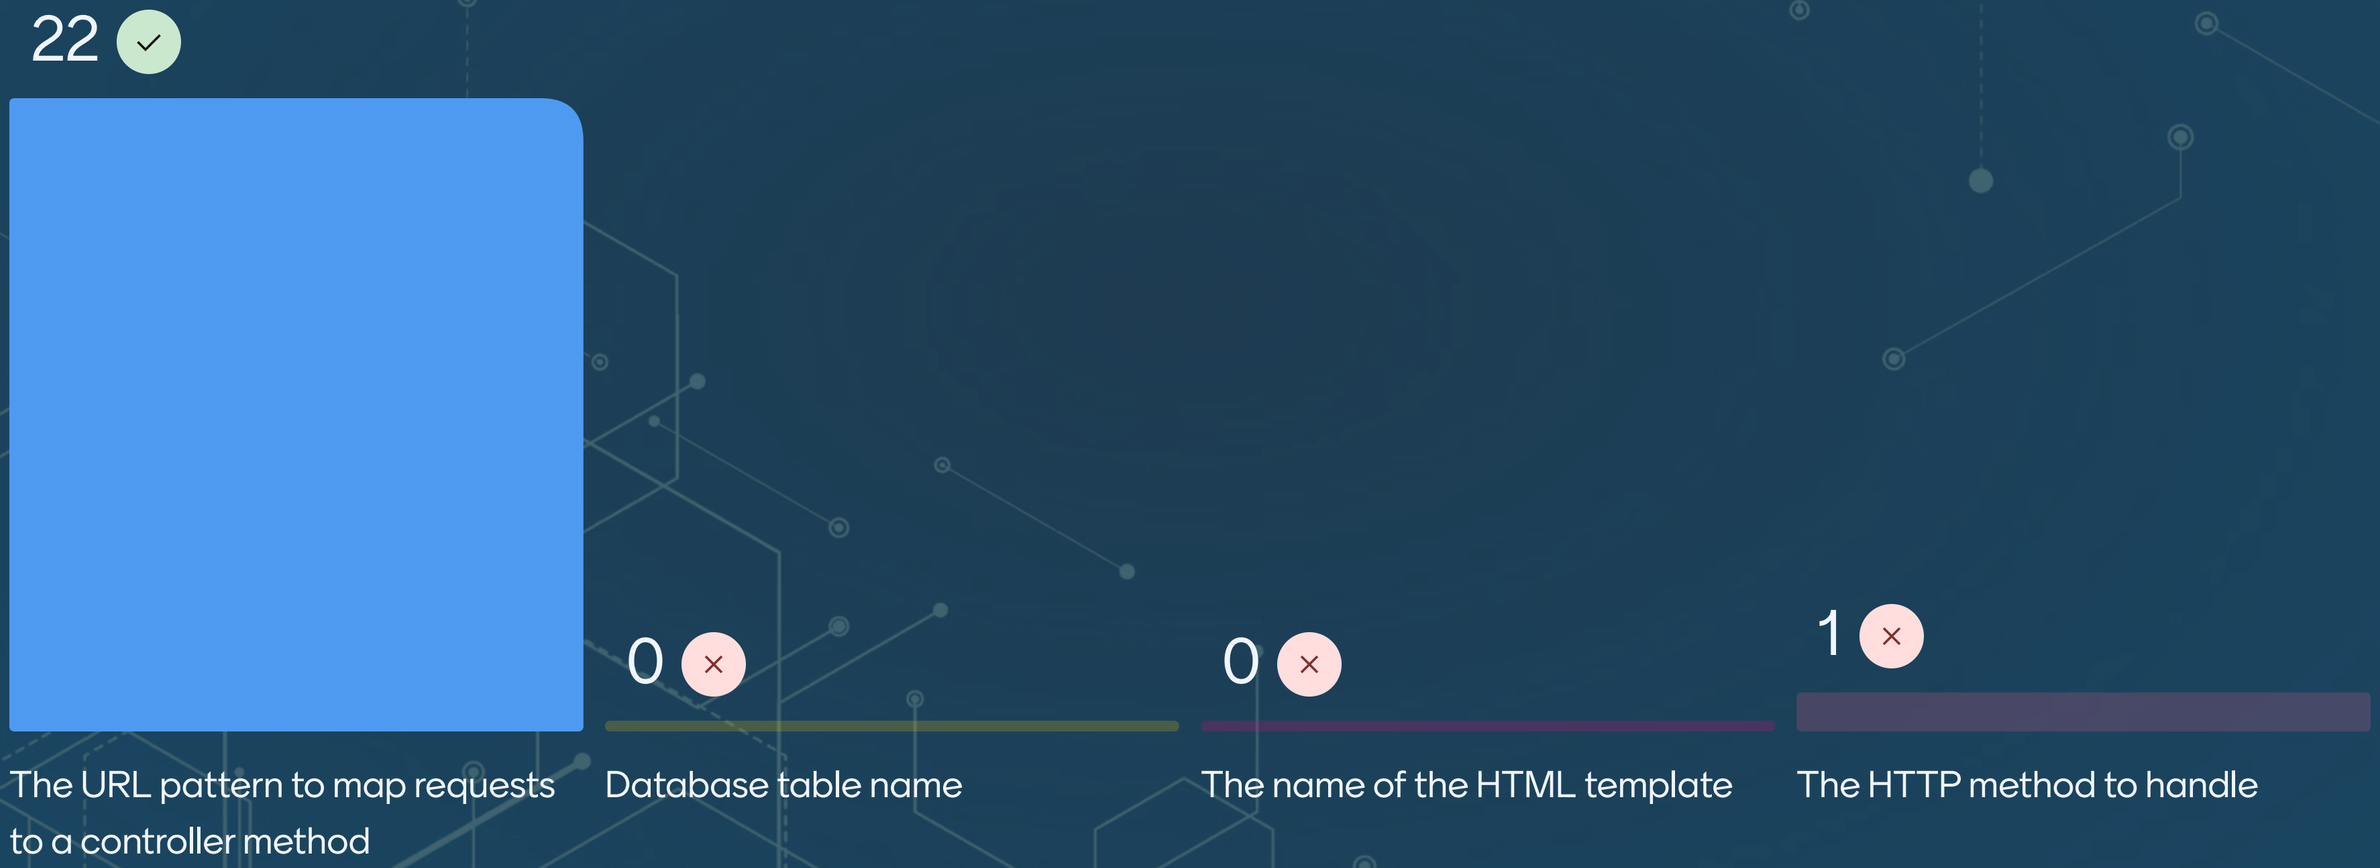

B) By creating a `servlet-config.xml` file inside the `WEB-INF` folder

C) By using the `ServletRegistration.Dynamic` API in a `WebApplication

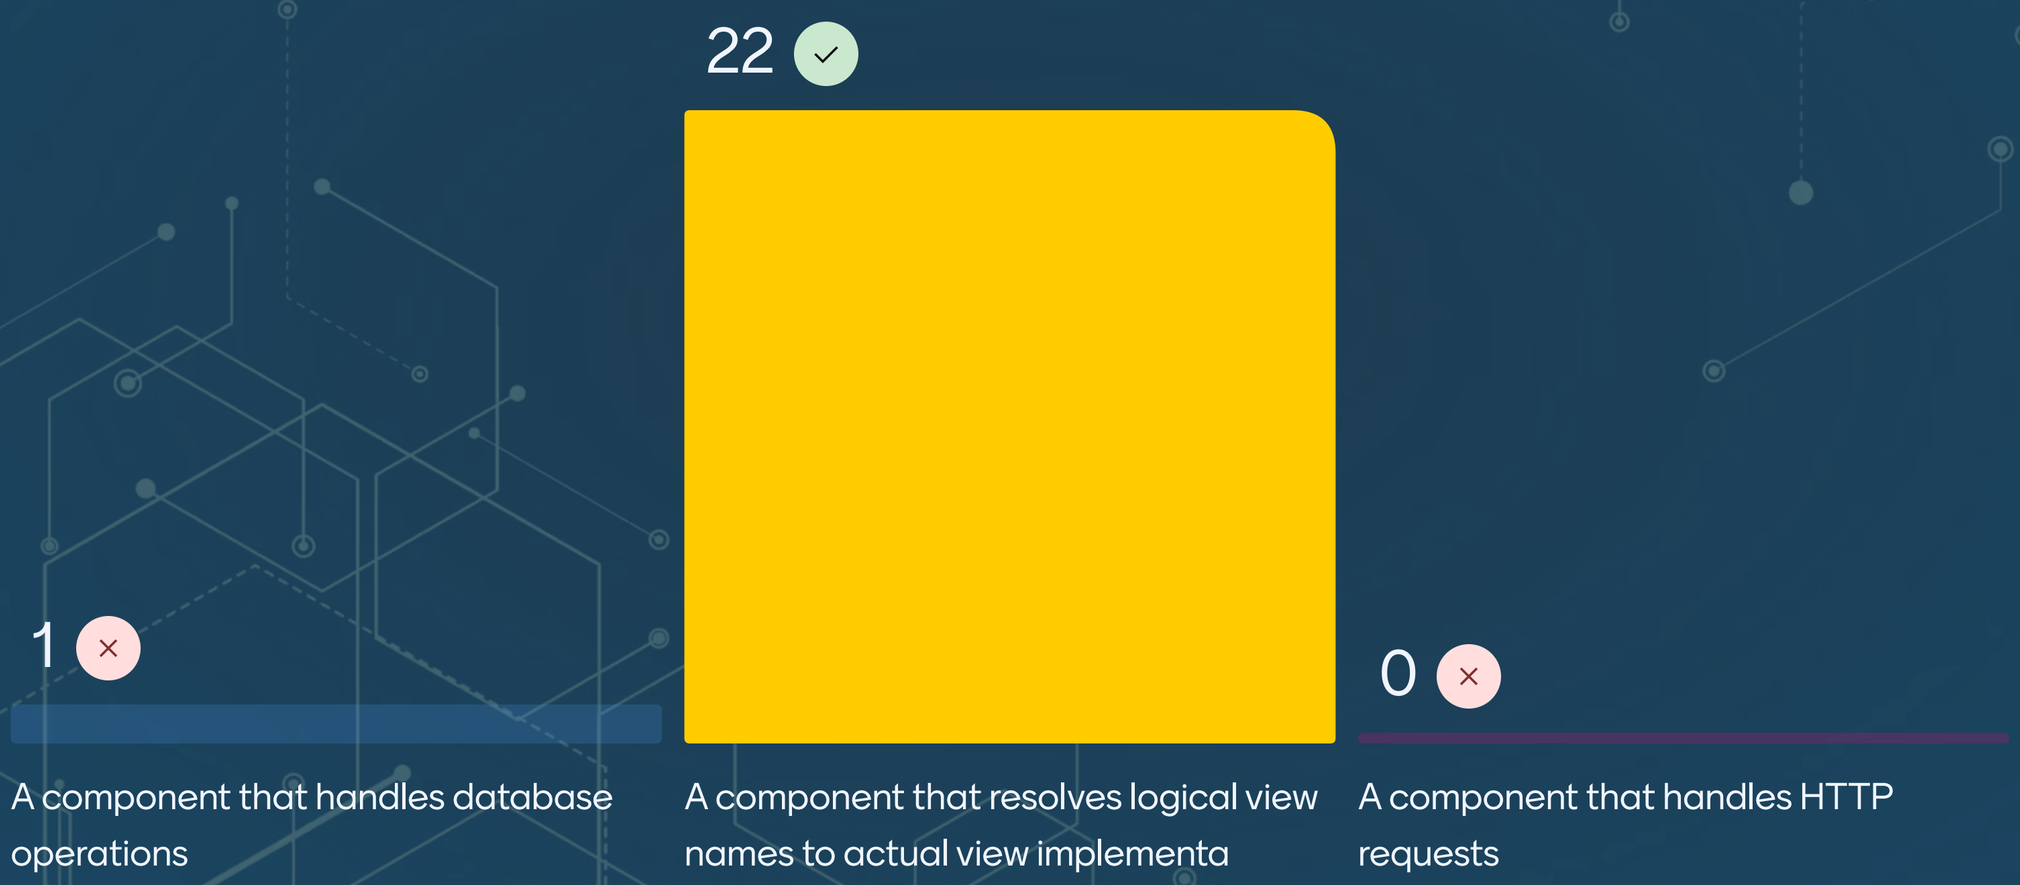

D) Both A and C.

iTPU IT PARK UNIVERSITY

In Spring MVC, what does the @RequestMapping annotation specify?

What is a ViewResolver in Spring MVC?
