Ioc

What is core component of Spring Framework that provides the basic functionality for configuration and dependency injection?

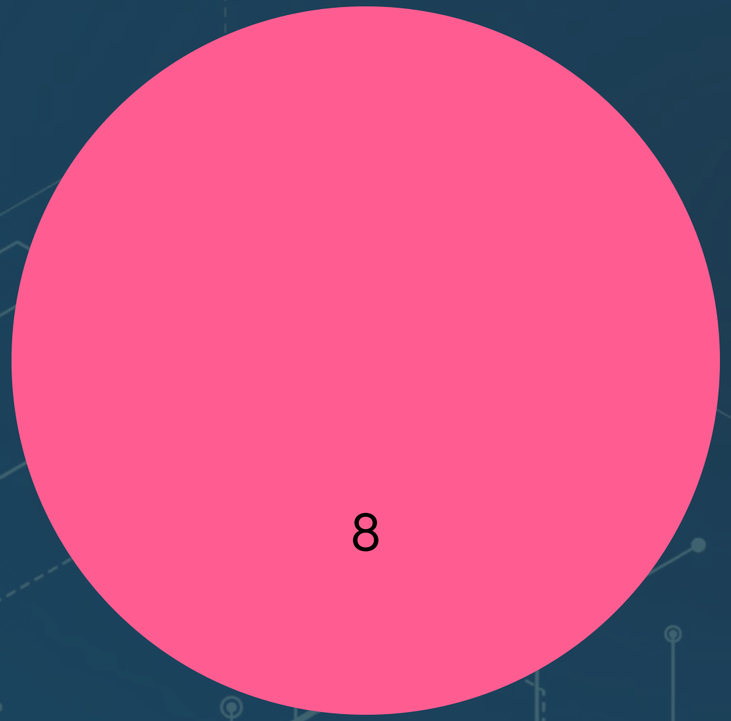

Which of the following is NOT a type of IoC container provided by the Spring Framework?

3	A) BeanFactory.	✗
0	B) ApplicationContext.	✗
2	C) WebApplicationContext.	✗
2	D) ConfigurationManager.	✓

Which configuration approach can be used to define beans for the IoC container in Spring?

0	A) XML-based configuration.	×
0	B) Annotation-based configuration.	×
0	C) Java-based configuration.	×
8	D) All of the above.	✓

Which of the following is NOT a method of implementing dependency injection in Spring?

0 A) Setter Injection. ×

0 B) Constructor Injection. ×

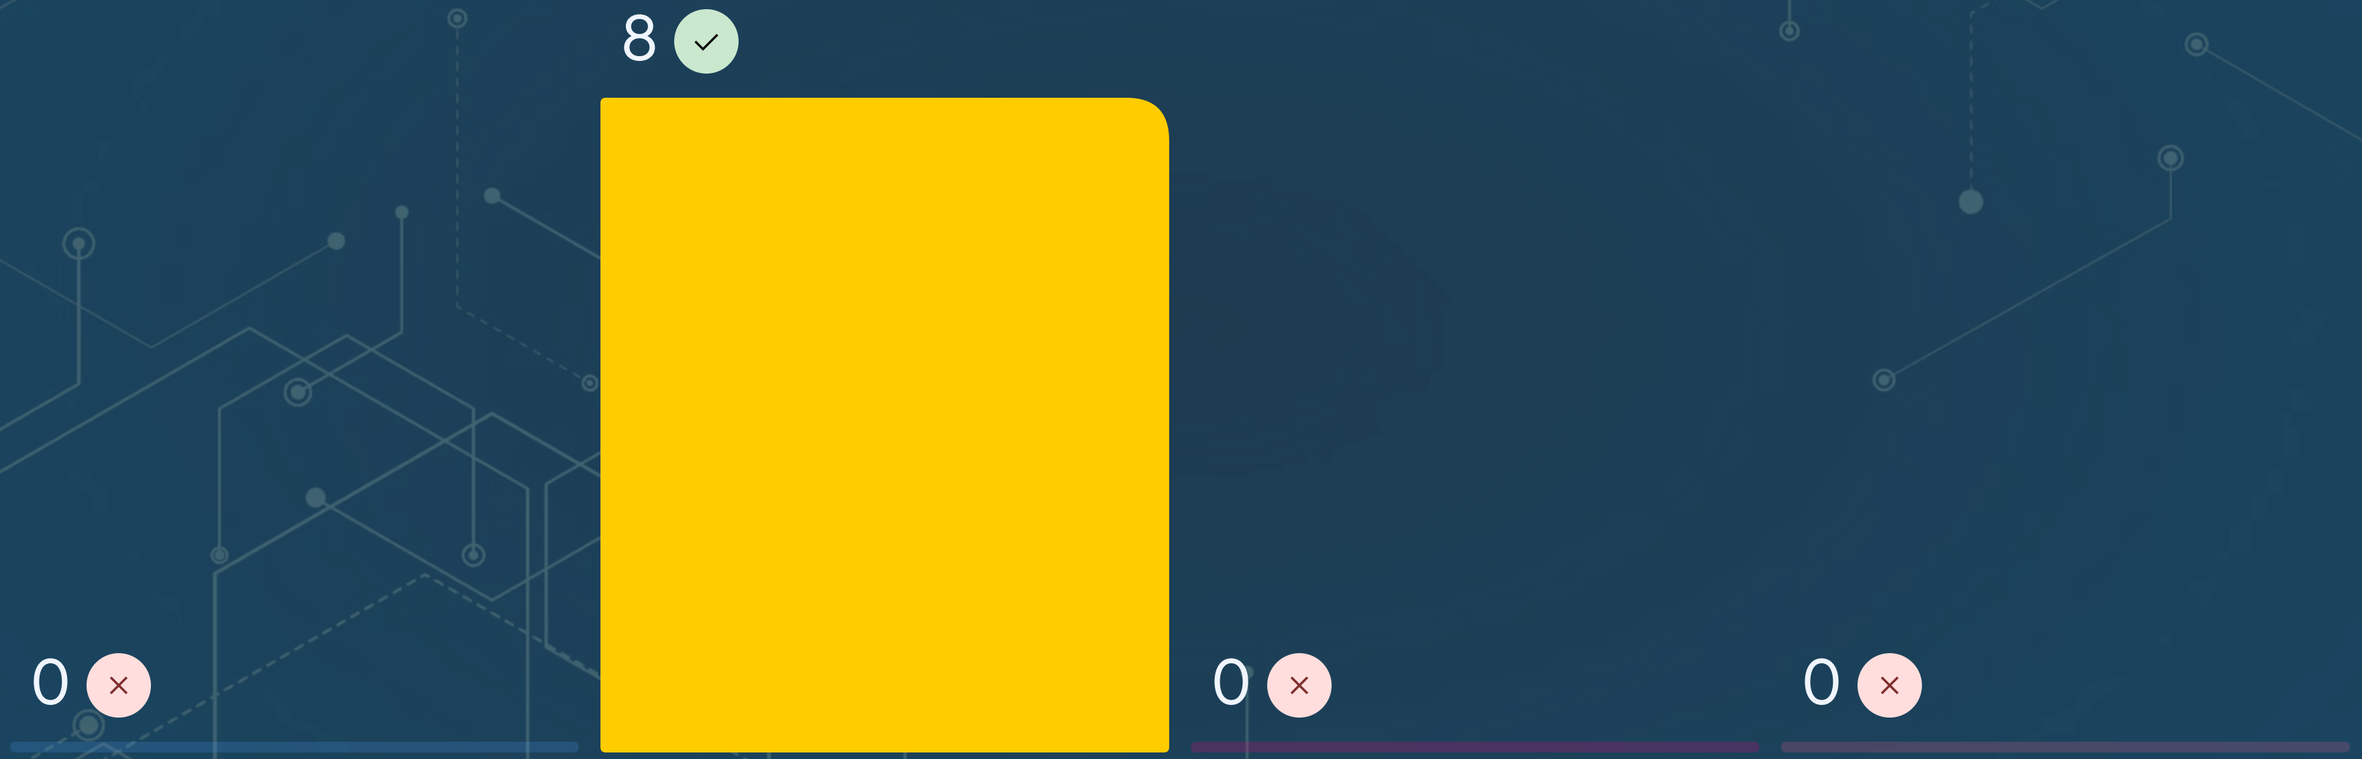

0 C) Method Injection. ×

7 D) Property Injection (Java Reflection). ✓

7/7

In annotation-based configuration, which annotation marks a class as a Spring-managed bean that can have its dependencies injected?

Spring Core (ws-16)

0

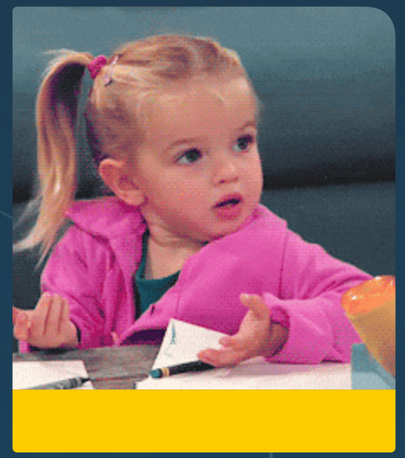

Have you started 'Spring Core'?

5

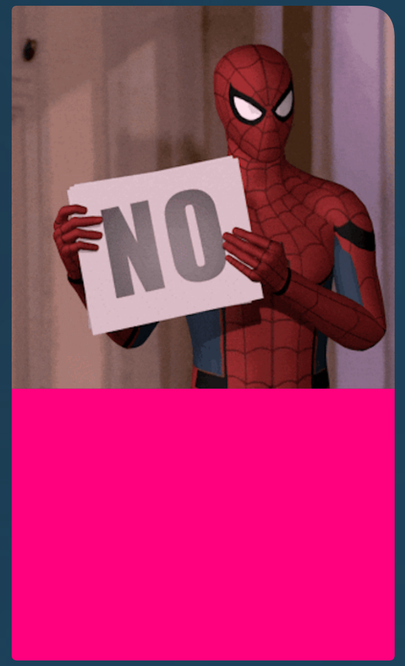

yesssssssss

1

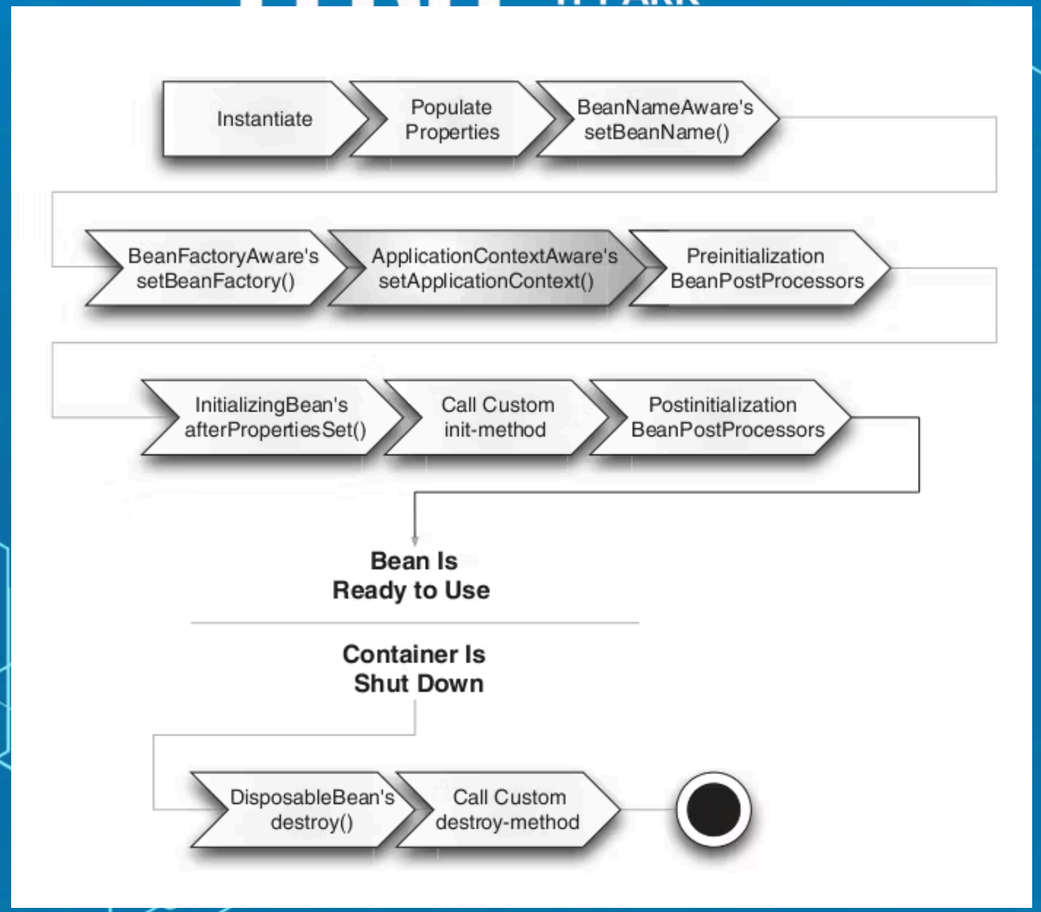

?!?!?!?!?!?!?!?!?!?!?!

What is the default scope of a Spring bean?

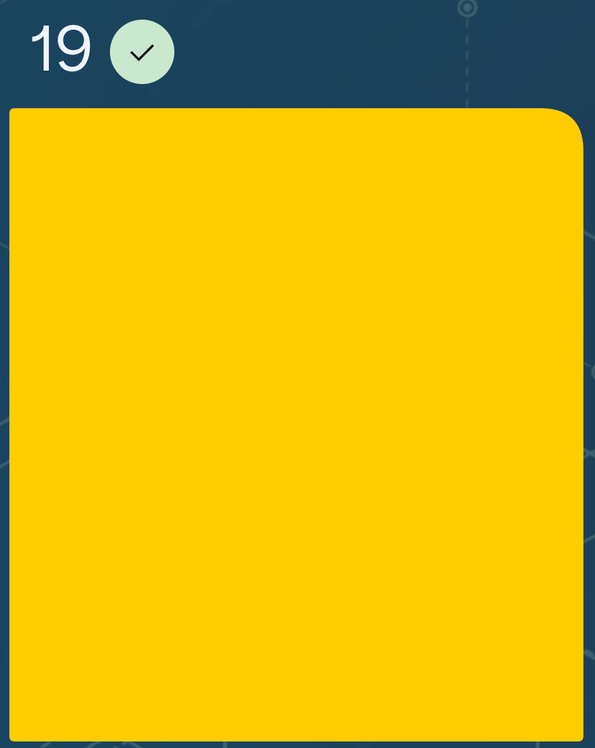

Which Spring bean scope creates a new bean instance for every HTTP request in a web application?

At what point in the Spring Bean lifecycle is the @PostConstruct annotation triggered?

What role does the ApplicationContext play in the Spring Framework?

19

A) It provides the IoC container and manages the lifecycle of beans.

0

B) It only manages the HTTP requests in a Spring web application.

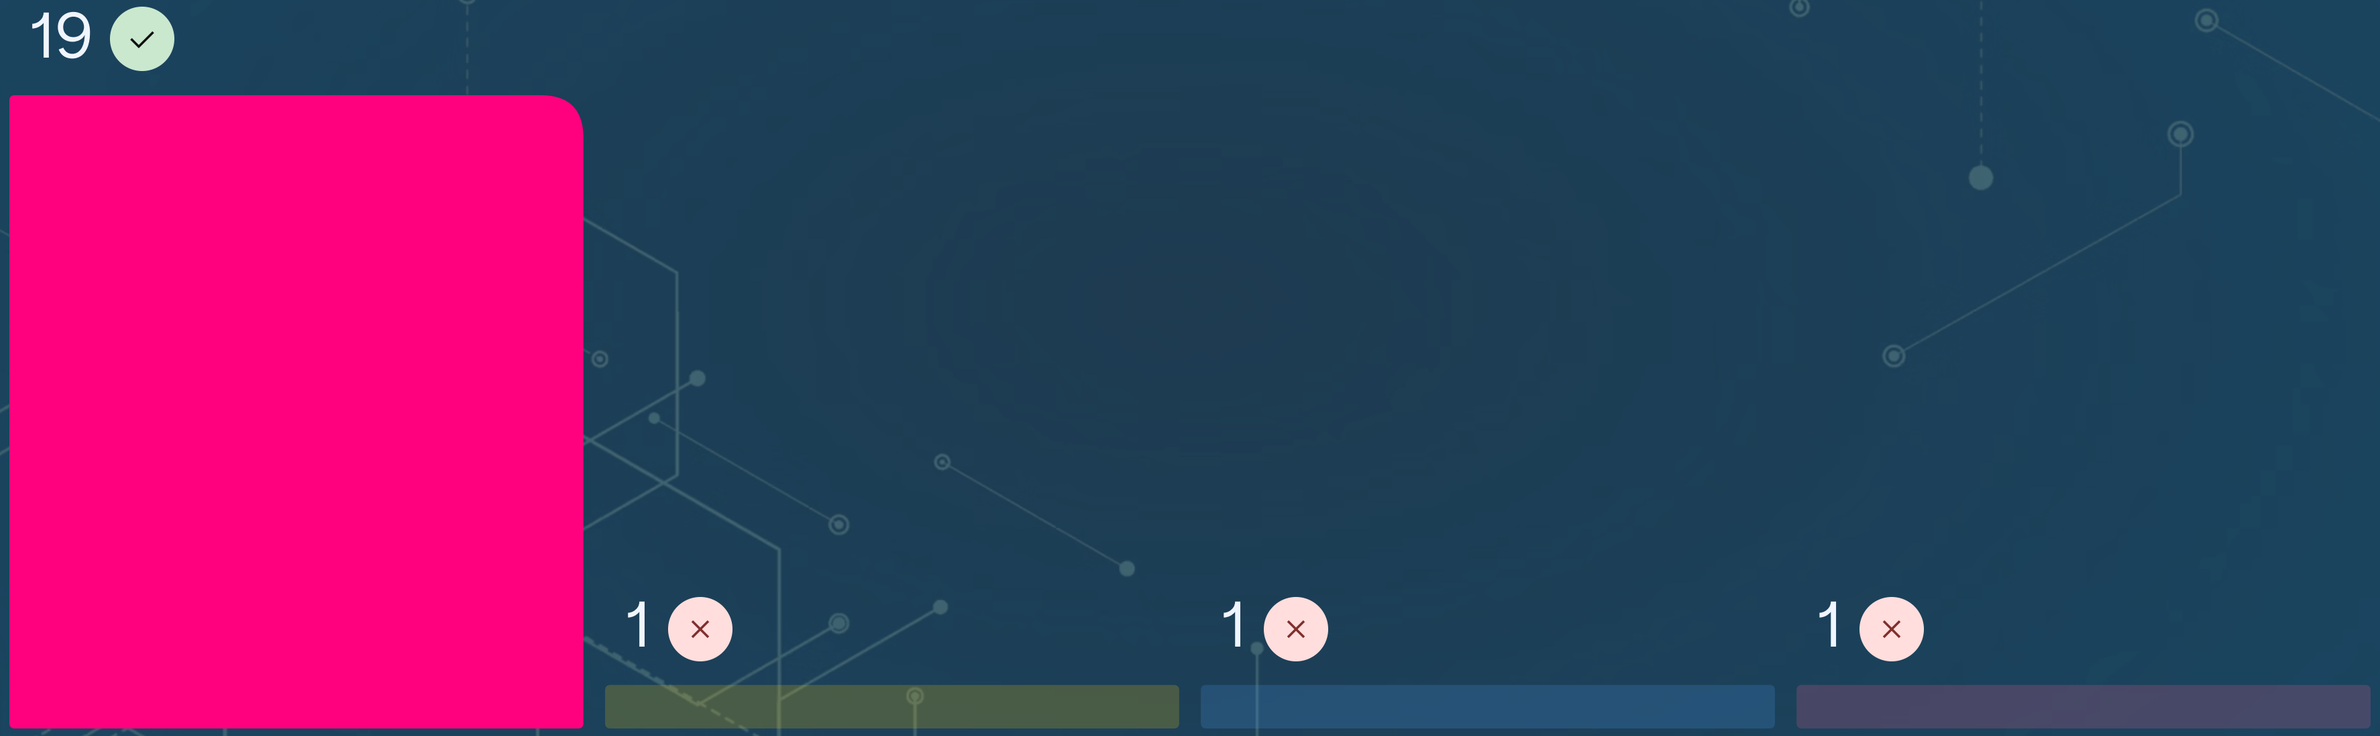

1

C) It stores user authentication details for applications.

0

D) It performs database operations in the background.

Which method is called in the Spring bean lifecycle just before the destruction of a bean?

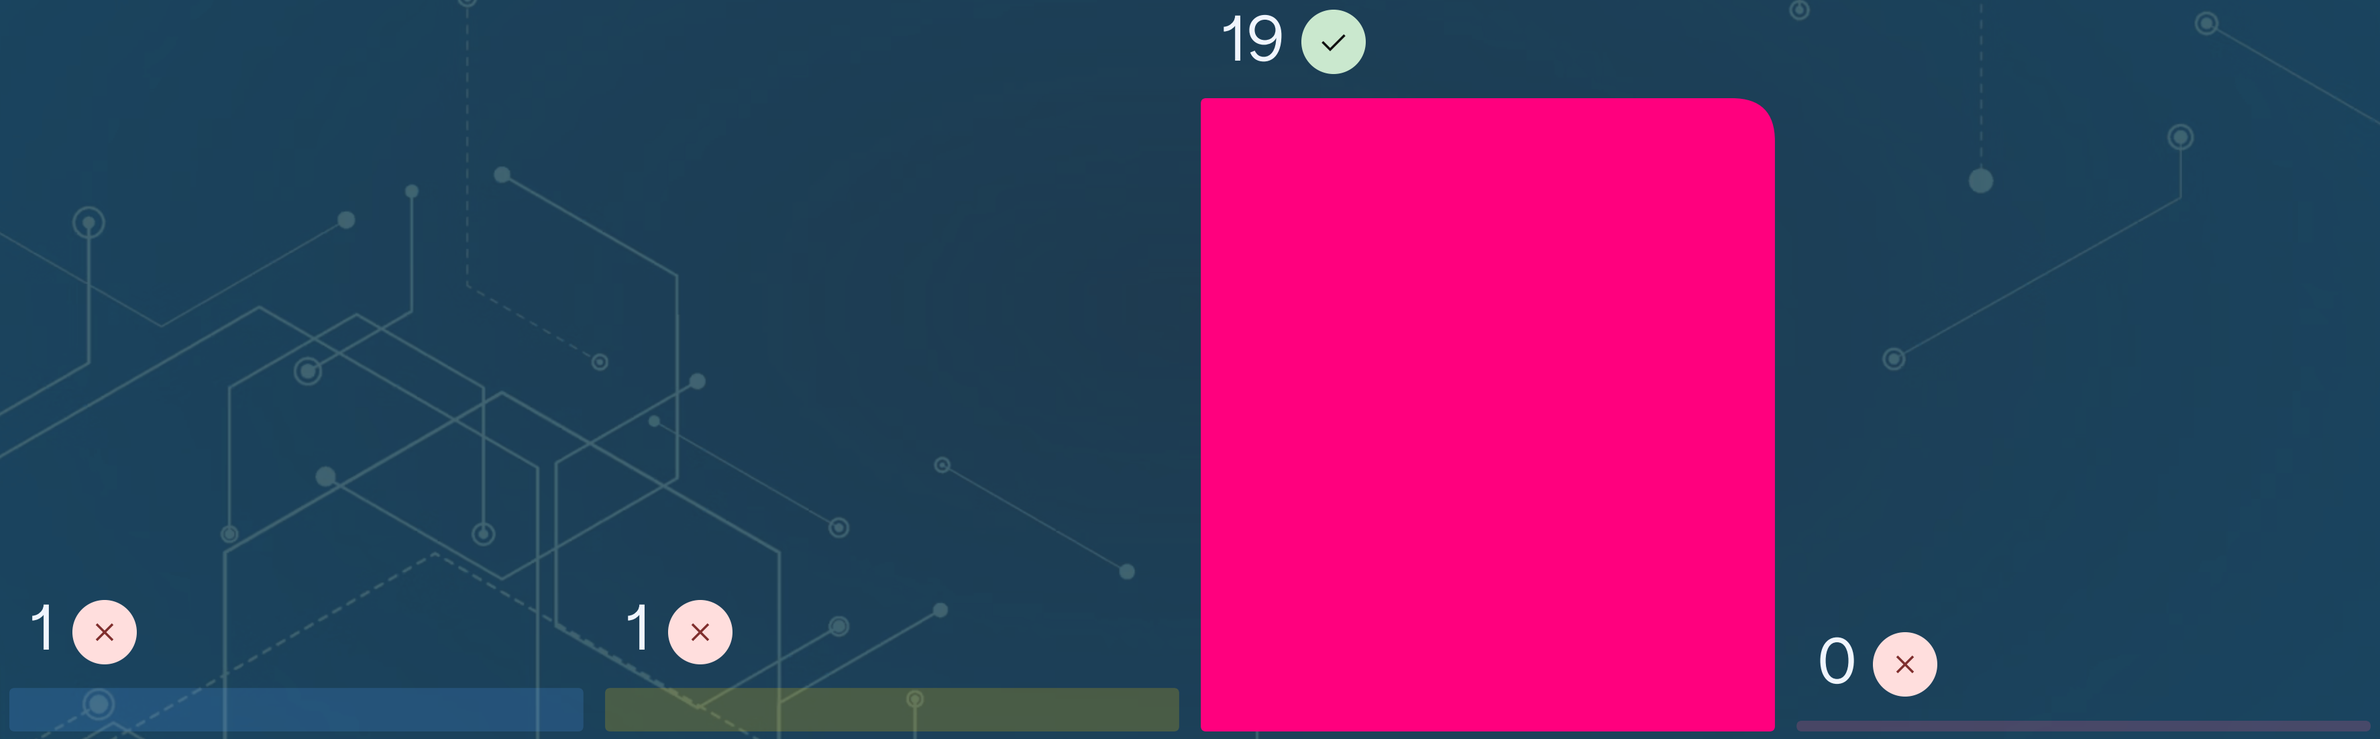

A) `@PreDestroy`.

B) `destroy()`.

C) `@PostConstruct`.

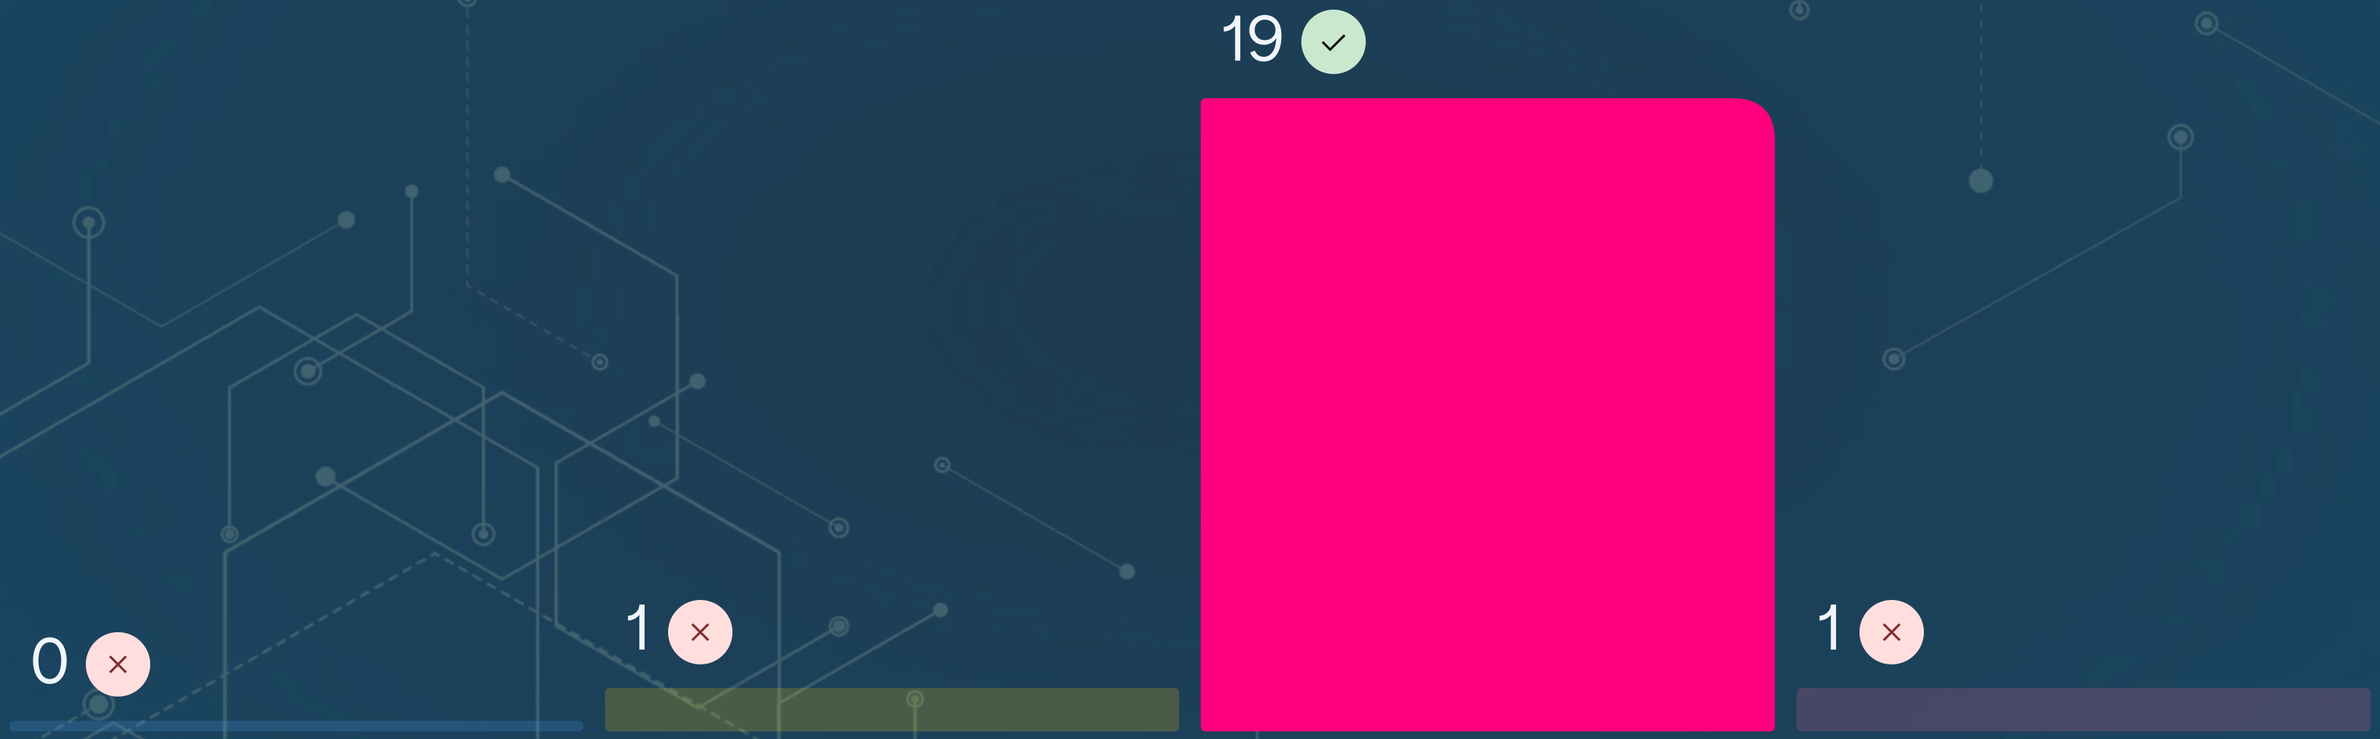

D) `init()`.

Which annotation is used to define a Spring bean in a Java-based configuration?

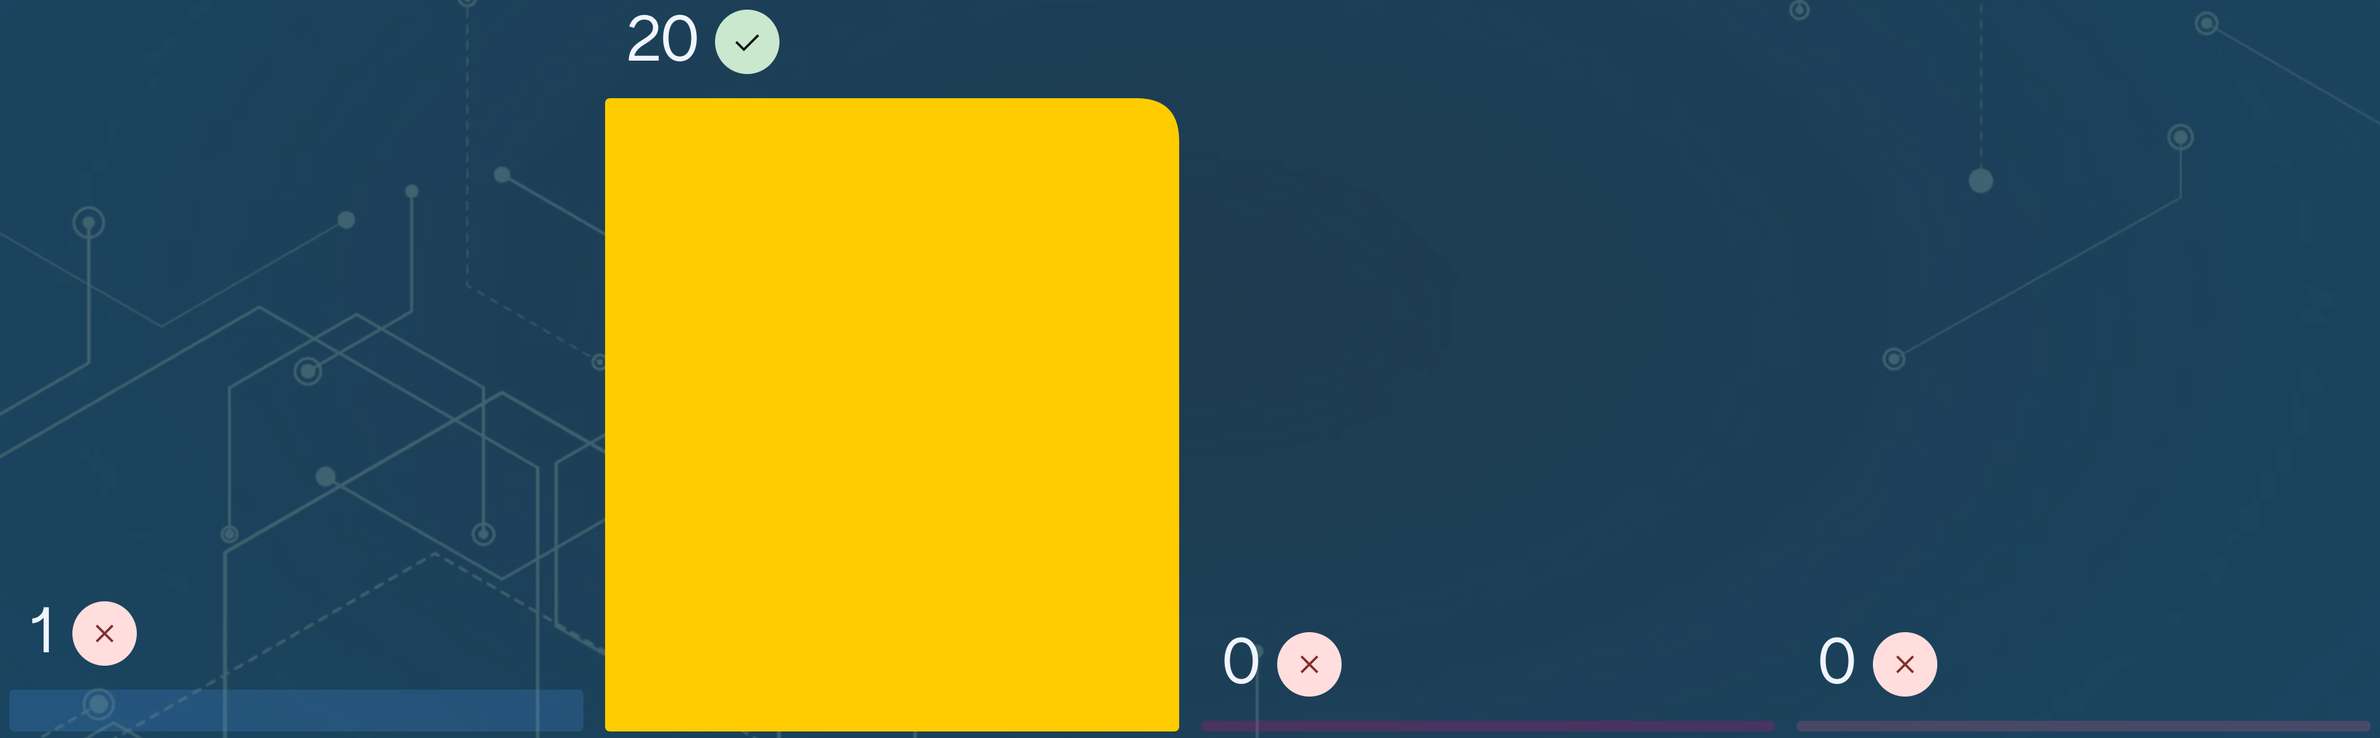

iTPU IT PARK UNIVERSITY

Which of the following is NOT a valid Spring bean scope?

ITPU IT PARK UNIVERSITY

What happens when a bean is defined in the "prototype" scope in Spring?

A) Only one instance of the bean is created per Spring IoC container.

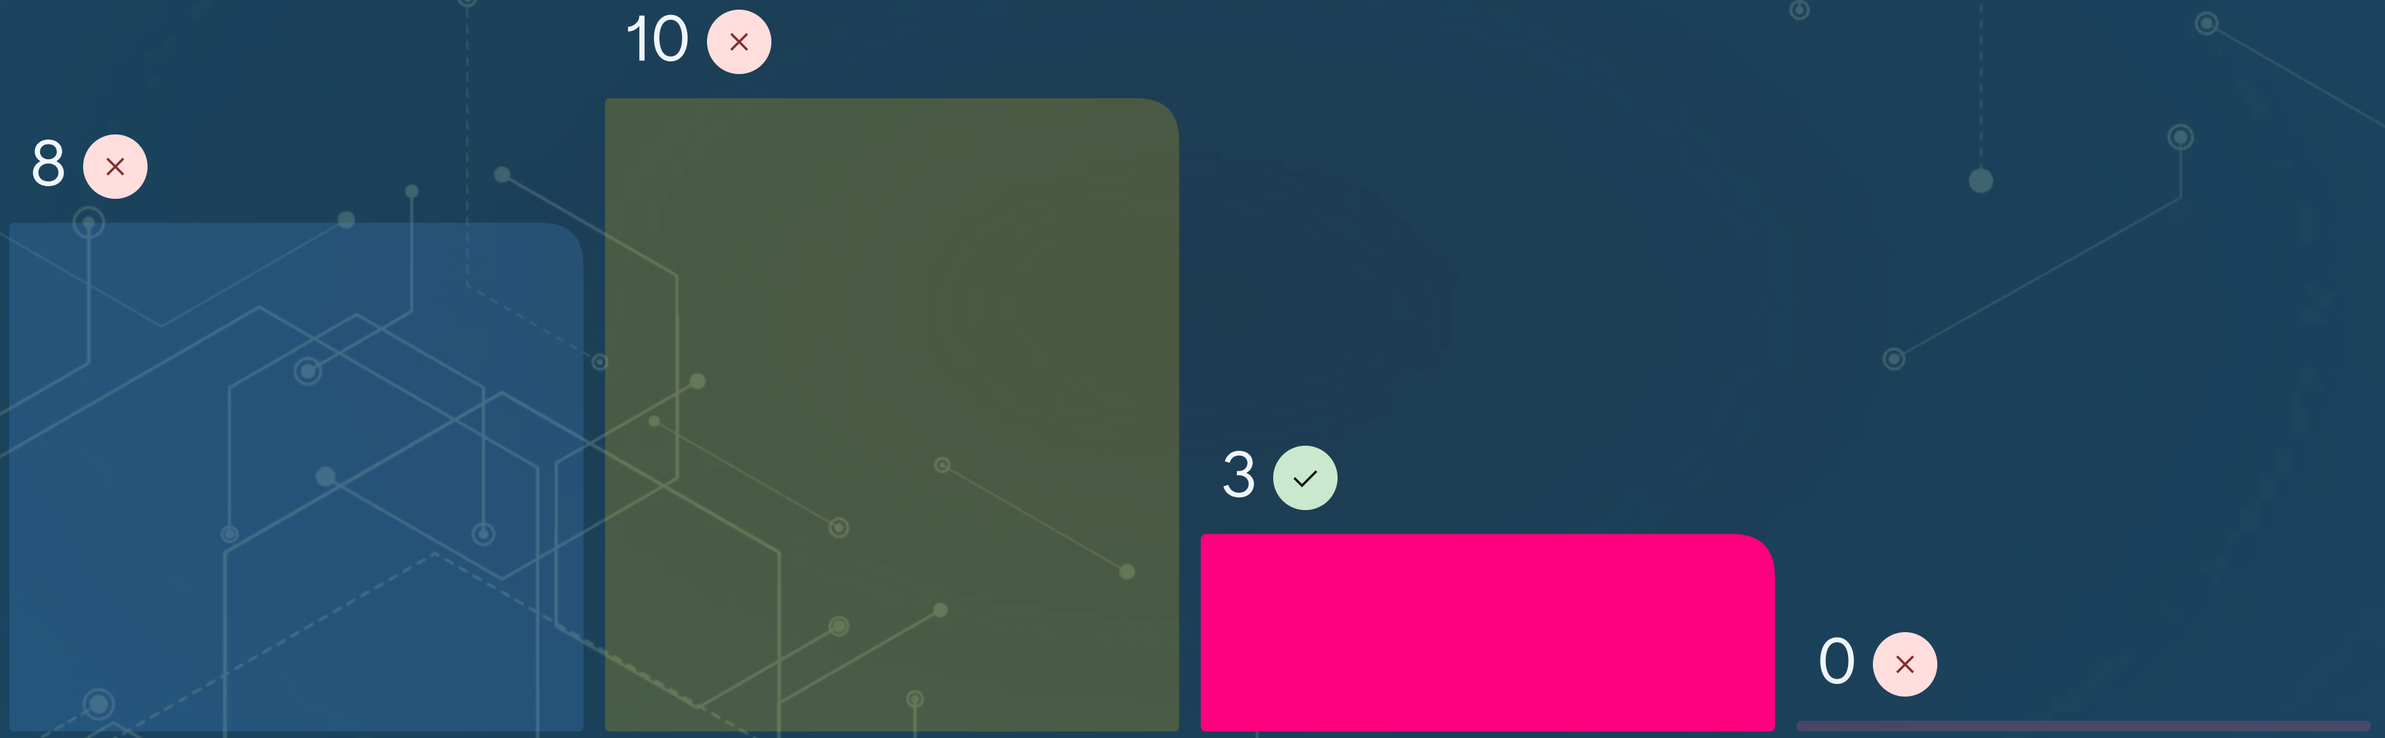

B) A new bean instance is created each time it is requested.

C) The bean is scoped to an HTTP session.

D) The bean instance persists across all HTTP requests.

ITPU IT PARK UNIVERSITY

Which of the following rules applies when using both "by type" and "by name" for dependency resolution in Spring?

A) "By type" takes precedence over "by name" if a matching type exists

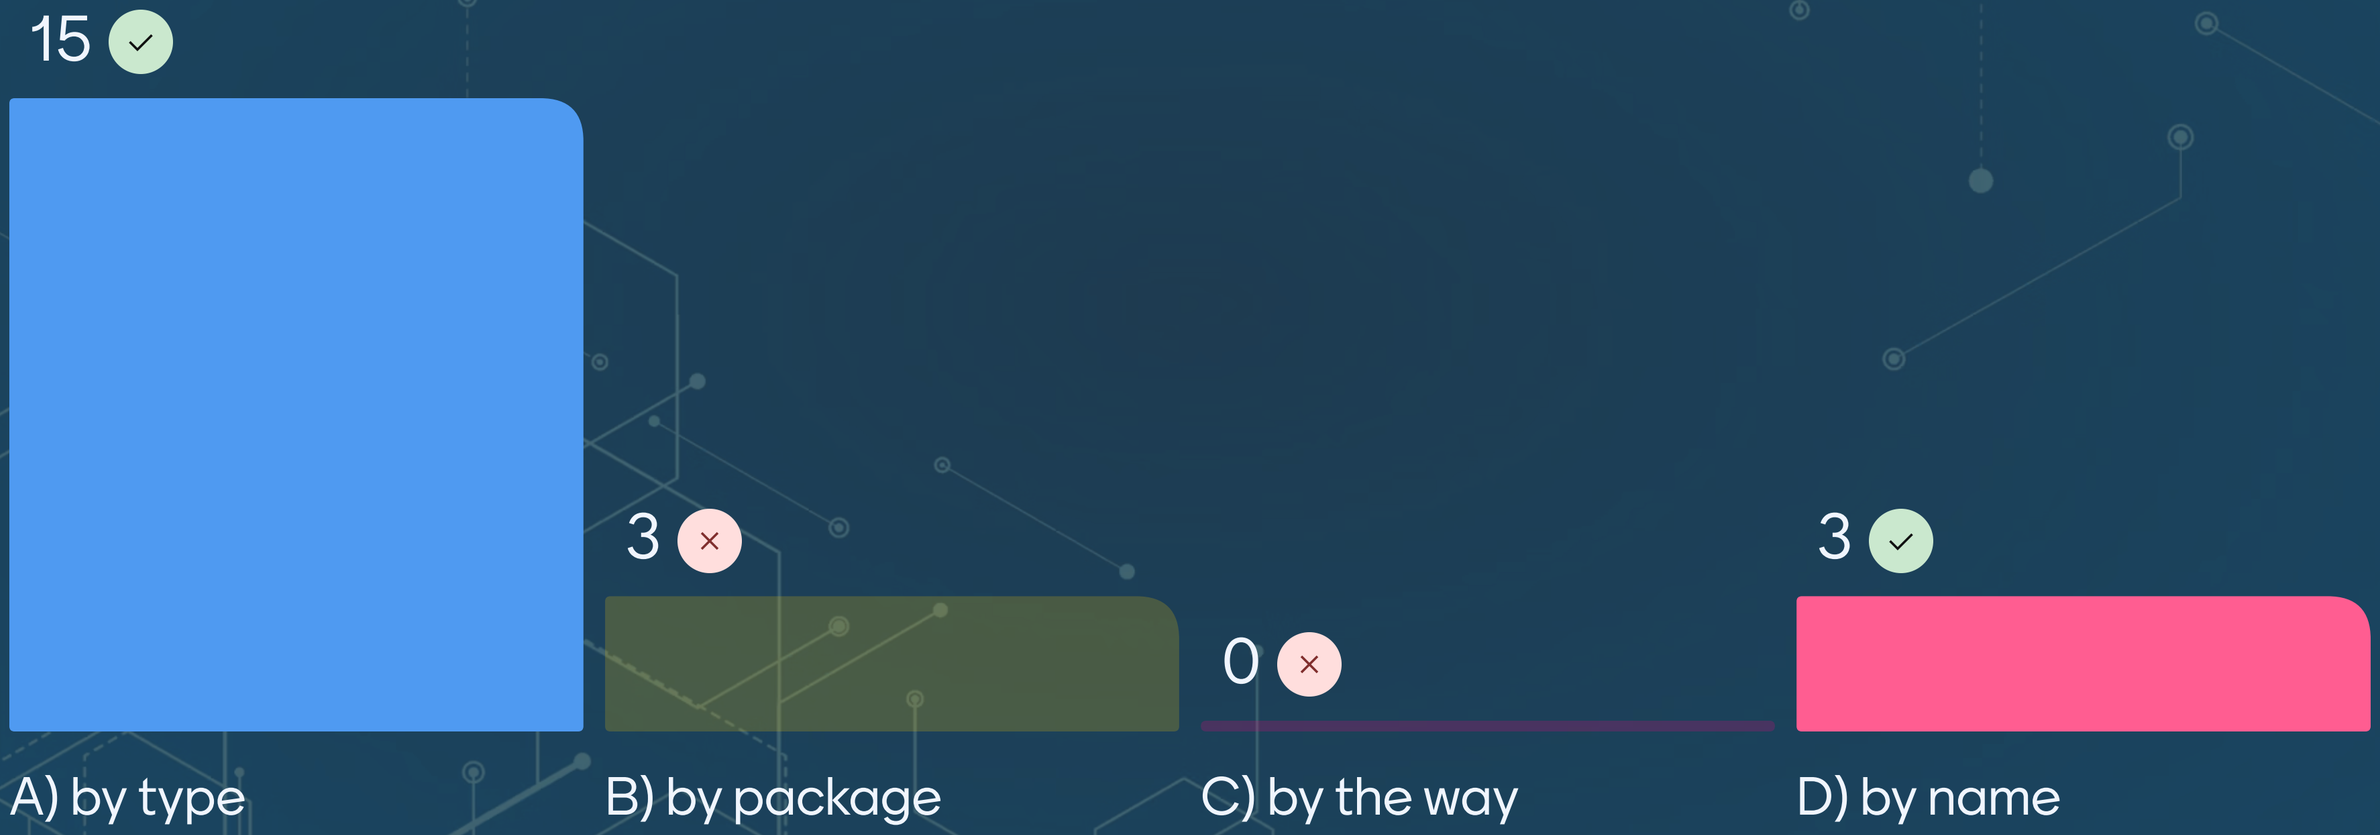

B) "By name" overrides "by type" even if type matches multiple beans

C) Both "by type" ,"by name" must be explicitly defined in annotations

D) Spring ignors rules if ambiguos dependencies exist in IoC Conteiner

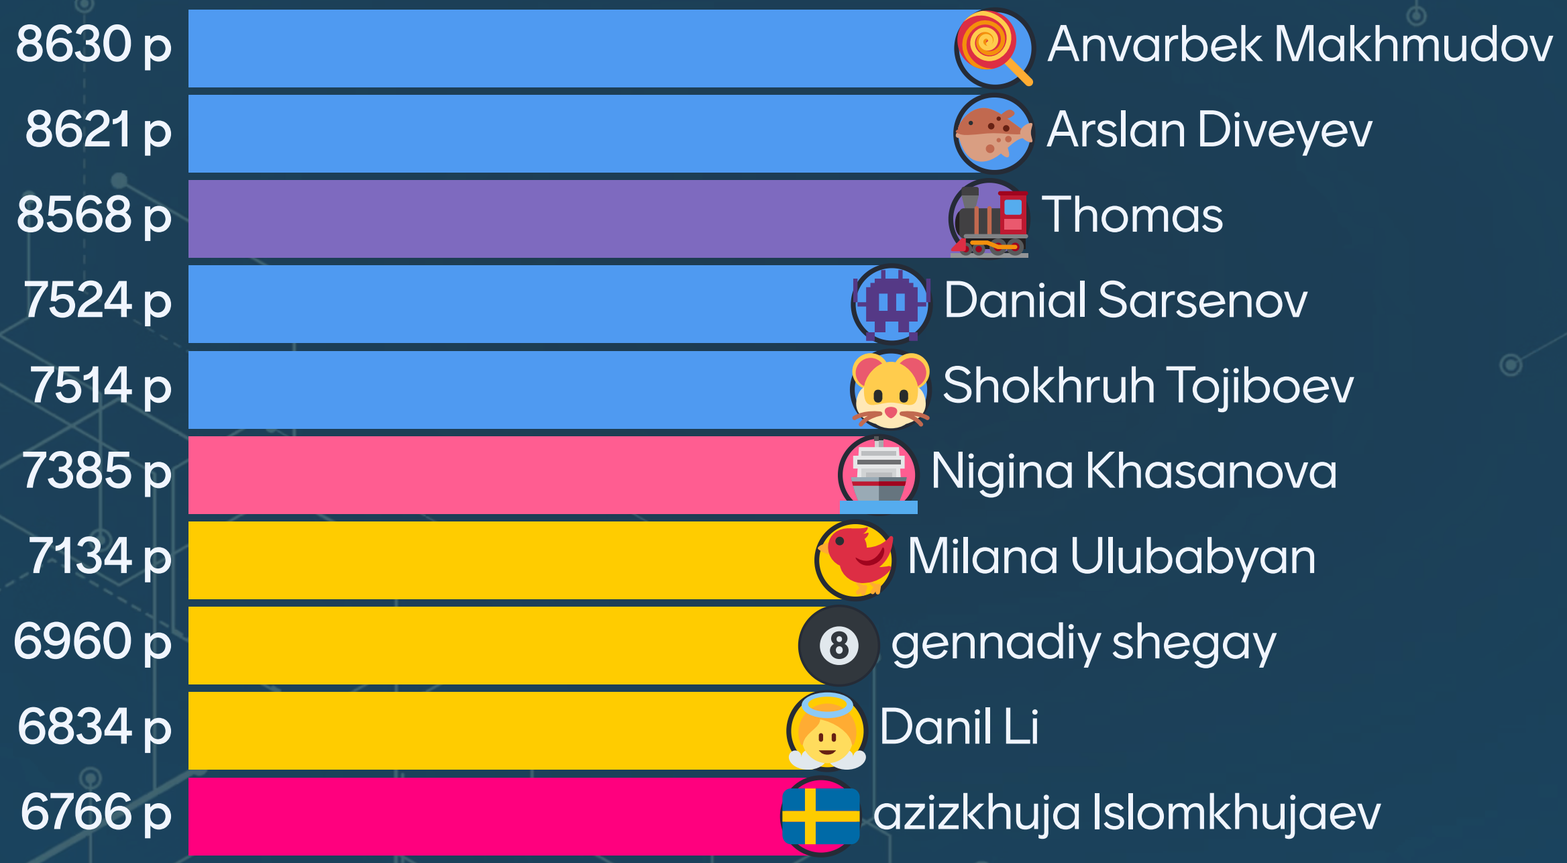

iTPU IT PARK UNIVERSITY

What dependency injection 'rules' do you know?
